Specifier's Guide

Line installation and protective equipment master catalog 5 kV - 35 kV electrical distribution systems

Cooper Power Systems
by EATON

Eaton and Cooper united.

Energizing a world that demands more.

We deliver:

- **Electrical solutions** that use less energy, improve power reliability and make the places we live and work safer and more comfortable
- **Hydraulic and electrical solutions** that enable machines to deliver more productivity without wasting power
- **Aerospace solutions** that make aircraft lighter, safer and less costly to operate, and help airports operate more efficiently
- **Vehicle drivetrain and powertrain solutions** that deliver more power to cars, trucks and buses, while reducing fuel consumption and emissions

Discover today's Eaton.

Powering business worldwide

As a global power management company, we help customers worldwide manage the power needed for buildings, aircraft, trucks, cars, machinery and businesses.

Eaton's innovative technologies help customers manage electrical, hydraulic and mechanical power more reliably, efficiently, safely and sustainably.

We provide integrated solutions that help make energy, in all its forms, more practical and accessible.

With 2012 sales of $21.8 billion on a pro forma basis, Eaton has approximately 102,000 employees around the world and sells products in more than 175 countries.

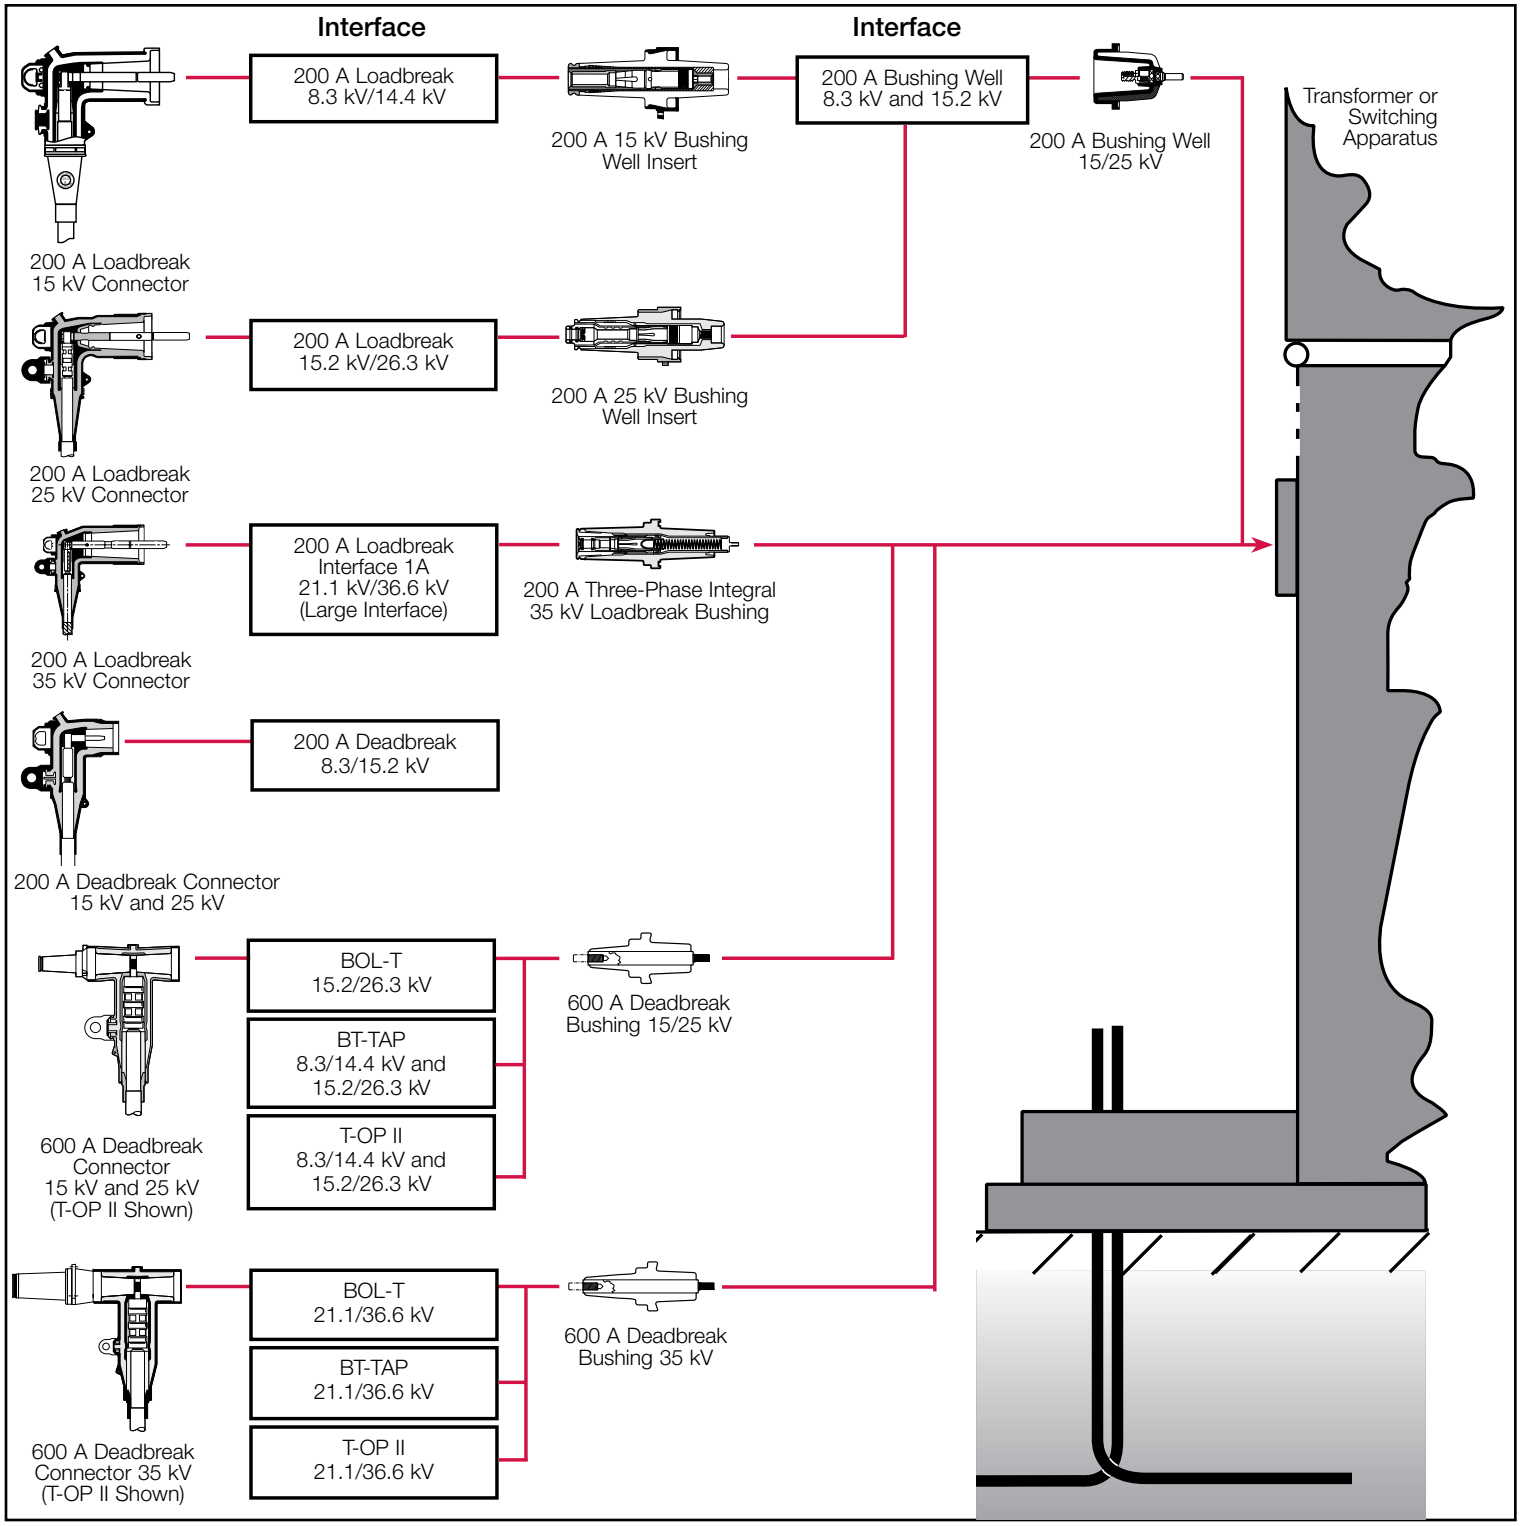
Standard Interfaces for Separable Connectors and Components

The following diagram specifies the IEEE Std 386™ standard interfaces supplied by Cooper Power Systems for various applications to ensure interchangeability of any mating components.

Interface Description Per IEEE Std 386™ – 2006 standard



Certified Tests and Performance

Eaton's Cooper Power Systems Connectors, Splices, Underground Surge Arresters, Tools, Bushings, Fusing, Faulted Circuit Indicators and Sectionalizing Equipment have been designed and tested per applicable portions of Institute of Electrical and Electronics Engineers, Inc. (IEEE®), American National Standards Institute (ANSI®), National Electrical Manufacturers Association (NEMA) and other industry standards including:

- IEEE Std 386™ standard for Separable Connectors
- IEEE Std 404™ standard for Cable Joints and Splices
- IEEE Std C62.11™ standard for Metal Oxide Surge Arresters
- IEEE Std C37.41™ standard for Current-Limiting Fuses
- IEEE Std 592™ standard for Exposed Semi-conducting Shields
- **ANSI C119.4 Standard** for Copper and Aluminum Conductor Connectors
- **AEIC CS5**, **CS6 and CS8 Standards** for XLP and EPR Insulated Cables
- **ICEA S-94-649 Standard** for XLP and EPR Insulated Cables

Cooper Power Systems Separable Connectors are rated for 15 kV, 25 kV and 35 kV systems in accordance with the following ratings.

Splice Voltage Ratings in Accordance with IEEE Std 404™ standard

Voltage Ratings and Characteristics			
Description	**Voltage**		
Standard Voltage Class (kV)	15	25	35
Maximum Rating Phase-to-Ground (kV rms)	8.7	14.4	20.2
AC 60 Hz 1 Minute Withstand (kV rms)	35	52	69
DC 15 Minute Withstand (kV)	70	100	125
BIL and Full Wave Crest (kV peak)	110	150	200
Minimum Corona Voltage Level (kV)	13	22	31

Splice Current Ratings in Accordance with IEEE Std 404™ standard

Current Ratings and Characteristics	
Description	**Amperes**
Continuous	Equal to the current rating of the cable per IEEE Std 404™ standard
Short Time	Equal to the current rating of the cable per IEEE Std 404™ standard

200 A Loadbreak Connector Ratings in Accordance with IEEE Std 386™ standard

Voltage Ratings	15 kV	25 kV	35 kV
Standard Voltage Class	15	25	35
Maximum Rating Phase-to-Phase	14.4	26.3	36.6
Maximum Rating Phase-to-Ground	8.3	15.2	21.1
AC 60 Hz 1 Minute Withstand	34	40	50
DC 15 Minute Withstand	53	78	103
BIL and Full Wave Crest	95	125	150
Minimum Corona Voltage Level	11	19	26
Current Ratings	**15 kV**	**25 kV**	**35 kV**
Continuous	200 A rms	200 A rms	200 A rms
Switching	10 make/break operations at 200 A rms at 14.4 kV	10 make/break operations at 200 A rms at 26.3 kV	10 make/break operations at 200 A rms at 36.6 kV
Fault Closure	10,000 A rms sym. at 14.4 kV for 0.17s after 10 switching operations	10,000 A rms sym. at 26.3 kV for 0.17s after 10 switching operations	10,000 A rms sym. at 36.6 kV for 0.17s after 10 switching operations
Short Time	10,000 A rms sym. for 0.17s 3,500 A rms sym. for 3.0s	10,000 A rms sym. for 0.17s 3,500 A rms sym. for 3.0s	10,000 A rms sym. for 0.17s 3,500 A rms sym. for 3.0s

600 A Deadbreak Connector Ratings in Accordance with IEEE Std. 386™ standard

Voltage Ratings	15 kV	25 kV	35 kV
Standard Voltage Class	25	25	35
Maximum Rating Phase-to-Ground	15.2	15.2	21.1
AC 60 Hz 1 Minute Withstand	40	40	50
DC 15 Minute Withstand	78	78	103
BIL and Full Wave Crest	125	125	150
Minimum Corona Voltage Level	19	19	26
Current Ratings	**15 kV**	**25 kV**	**35 kV**
600 A Interface**			
Continuous	600 A rms	600 A rms	600 A rms
24 Hour Overload	1,000 A rms	1,000 A rm	1,000 A rms
Short Time	25,000 A rms sym. for 0.17 s 10,000 A rms sym. for 3.0 s	25,000 A rms sym. for 0.17 s 10,000 A rms sym. for 3.0 s	25,000 A rms sym. for 0.17 s 10,000 A rms sym. for 3.0 s
200 A Interface On Loadbreak Reducing Tap Plug (LRTP)*			
Continuous	200 A rms	200 A rms	200 A rms
Switching	10 make/break operations at 200 A rms at 14.4 kV	10 make/break operations at 200 A rms at 26.3 kV	10 make/break operations at 200 A rms at 36.6 kV
Fault Closure	10,000 A rms sym. at 14.4 kV for 0.17s after 10 switching operations	10,000 A rms sym. at 26.3 kV for 0.17s after 10 switching operations	10,000 A rms sym. at 36.6 kV for 0.17s after 10 switching operations
Short Time	10,000 A rms sym. for 0.17 s 3,500 A rms sym. for 3.0s	10,000 A rms sym. for 0.17 s 3,500 A rms sym. for 3.0s	10,000 A rms sym. for 0.17 s 3,500 A rms sym. for 3.0s

Notes:
* System design and protection must recognize the ratings of 200 A interface.
** Optional 900 A rating is available. Refer to 600/900 A Deadbreak Connector section for more detail.

Part Number Selection Process for Cable Sensitive Products

Eaton's Cooper Power Systems 200 A and 600 A connector products are designed for applications on XLPE, EPR or other solid dielectric insulated underground electrical cables. In order to maintain a reliable termination, the cable accessories must be sized correctly with the cable conductor size and cable insulation diameter.

The cable conductor size is used to determine the compression connector used. Proper sizing is important to ensure reliable current transfer from the underground cable conductor to the elbow connector. Conductor diameters are dependent on the conductor size in AWG or kcmil, and conductor type (stranded, compressed, compact or solid).

The cable insulation diameter (the diameter over the insulation) is critical because it is important to maintain a tightly sealed fit between the cable insulation and the elbow housing at the cable entrance. As the insulation thickness changes, so must the range of the cable accessory. Cable insulation diameter can be determined from the cable manufacturer's specification, or by referring to pages 8 (for cable made to the AEIC Standard including the ± 0.030 inch tolerance) or 9 (for cable made to the ICEA Standard) for minimum and maximum diameters.

EXAMPLE: PROPER ELBOW PART NUMBER SELECTION

Select an Eaton's Cooper Power Systems 15 kV 200 A Loadbreak Elbow with optional integral jacket seal and test point for an AEIC standard tape-shielded 15 kV cable with 133% insulation and 1/0 compact stranded conductor with an outer jacket diameter of 1.07".

Step 1 – Base Part Number Selection

Select base part number of **LEJ215** from page 11 for 15 kV voltage class. Note that on page 11 reference is also made to tables CR1 and CC1.

Step 2 – Determine Insulation Outside Diameter Range

Since cable is made to AEIC Standards, refer to page 8. 133% 15 kV cable corresponds to 220 mil insulation wall thickness. The AEIC table gives a range of 0.805" to 0.865" for 1/0 compact 220 mil cable.

Step 3 – Elbow Cable Range Selection

Refer to CR1 Table on page 13 and select a cable range code of "**AB**" with a range of 0.610" to 0.970" to cover 0.805" to 0.865".

LEJ215	CABLE RANGE CODE (CR1)

Step 4 – Elbow Connector Selection

Refer to CC1 Table on page 13 and select a conductor code of "**05**" which applies to the specified 1/0 compact conductor.

LEJ215	**AB**	CONDUCTOR CODE (CC1)

Step 5 – Optional Test Point Selection

In accordance with Note 1 on page 11, for an elbow with test point, add a "**T**" after the cable range and conductor code.

LEJ215	**AB**	**05**	**T**

Step 6 – Optional Ground Strap

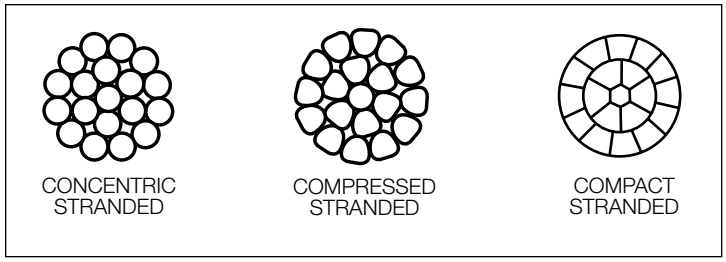
Tape-shielded cable requires a ground strap and bleeder wire to terminate. Add "GS" after test point option.

LE215	**AB**	**05**	**TGS**

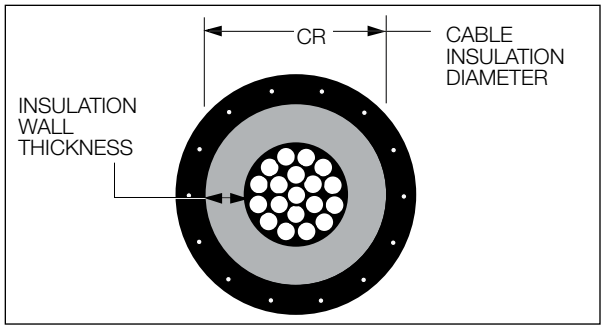
Step 7 – Ordering

Therefore, order Eaton's Cooper Power Systems part number

LEJ215AB05TGS



Types of Stranded Conductor



Cable insulation

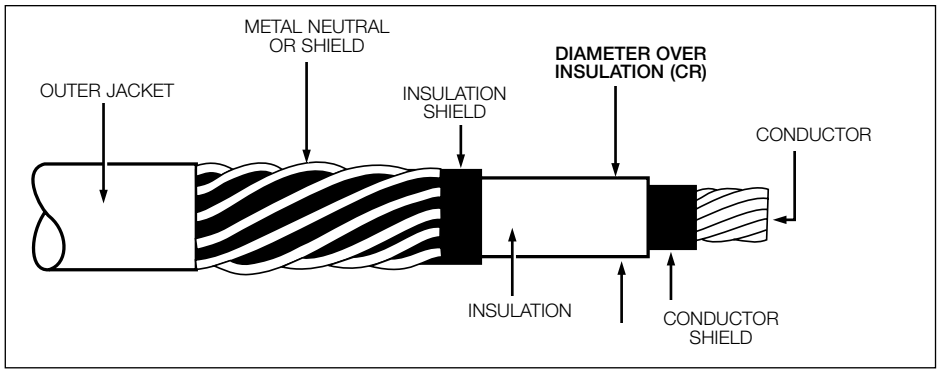


Illustration showing typical construction of medium voltage underground cable.

* See table below for standard insulation thickness.

175 mil is 100% insulated cable at 15 kV.
220 mil is 133% insulated cable at 15 kV.
260 mil is 100% insulated cable at 25 kV.
345 mil is 133% insulated cable at 25 kV.
345 mil is 100% insulated cable at 35 kV.

* See table below for standard insulation thickness.

175 mil is 100% insulated cable at 15 kV.
220 mil is 133% insulated cable at 15 kV.
260 mil is 100% insulated cable at 25 kV.
345 mil is 133% insulated cable at 25 kV.
345 mil is 100% insulated cable at 35 kV.

200 A Loadbreak Connectors

Our 200 A 15, 25, and 35 kV Loadbreak Elbow Connectors and Accessories are submersible, fully-shielded and insulated plug-in terminations, ideal for connecting underground cable to transformers, switchgear, sectionalizing cabinets and junctions. These connectors are molded using high-quality, peroxide-cured EPDM insulation for reliable field performance.

15 kV and 25 kV loadbreak elbows are available with an integral jacket seal for use with concentric neutral and other types of shielded cables.

All 200 A loadbreak connectors meet the electrical, mechanical, and dimensional requirements of IEEE Std 386™ standard and are designed to be fully interchangeable with other major manufacturers currently complying with IEEE Std 386™ standard.

25 kV POSI-BREAK Elbow and Cap

Our POSI-BREAK™ Elbow and Cap is an engineered solution that increases strike distance and improves reliability. The added features solve problems, such as:

- **Partial Vacuum Flashovers** – Under certain conditions during 25 kV switching, a partial vacuum can decrease the dielectric strength of the air inside the elbow/bushing or cap/bushing. This increases the possibility of a flashover from the elbow or cap's probe along the bushing interface to the grounded collar on the mating bushing product. The POSI-BREAK design eliminates the possibility of partial vacuum flashovers during switching because of the increased strike distance.
- **Contamination** – The field-proven interface seal prevents the ingress of moisture or contaminants. However, contamination introduced during installation or switching operations can reduce the strike distance along the interface. The increased insulation of the POSI-BREAK design counteracts the effect of contamination, increasing system reliability.

25 kV POSI-BREAK Elbow and Cap Specification Information

To capitalize on the benefits of the POSI-BREAK Elbow and Cap, include the following information for both the 25 kV 200 A Loadbreak Elbow and Insulated Protective Cap in your specification:

- Both elbow and cap must fully comply with IEEE Std 386™ standard.
- Strike distance from energized component to ground shall be at least 5.6" at $^1/_2$" interface separation.
- Both elbow and cap shall have an insulated probe and conductive Faraday Cage for relief of electrical stress and prevention of partial discharge.
- Semi-conductive insert shall be completely surrounded with EPDM insulating rubber.

35 kV Large Interface Elbow Bushing System*

Our 35 kV 200 A Large Interface Elbow Bushing System is a reliable, field proven design. This system has over 25 years of field experience while being used on large 35 kV distribution systems. Features of the Large Interface System include:

- Increased strike distance to provide greater reliability and overall performance.
- Reliable loadbreak switching and fault closure capability.
- Full line of large interface accessory products.

* Refer to bushing section on page 44 for more information on the bushing.

35 kV Elbow and Accessories Specification Information

To capitalize on the benefits of our 35 kV Large Interface Elbow include the following information in your specification:

- The 200 A Elbows and Accessories shall be 21.1 kV/36.6 kV three-phase rated, meeting the requirements of IEEE Std 386™ standard interface No. 1A (large 35 kV class interface).

200 A Loadbreak & Deadbreak Connectors

1. For an elbow **with test point**, add a "**T**" after the conductor code (CC1).
2. For an elbow kit with a **hold down bail assembly** included, insert a "**B**" after the test point option code. 15 kV only.
3. For optional braided ground strap/ bleeder wire for termination tape and wire shielded cable, insert "**GS**" after test point and/or bail option code.
4. For **individually packaged** product in a corrugated cardboard box, insert an "**X**" as the last character in the part number.
5. To include the **SA Series Cold Shrinkable Metallic Shield Adapters Kit** or **CS Series Cold Shrink Cable Sealing Kit**, add the appropriate suffix "**SA1**", "**SA2**", "**SA3**", "**SA4**" or "**CS1**", "**CS2**", or "**CS3**" to the end of the loadbreak elbow catalog number. Refer to Tables CJ1 and CJ2 on Page 13.
6. To order the **long version** (extended) **of the bushing insert**, put in an "**L**" as the seventh character in the part number.
7. Specify the number of **interfaces** by inserting a "**2**", "**3**", or "**4**" directly after the base part number.
8. To add a **stainless steel bracket**, insert a "**B**" as the last character in the part number, or to add **U-straps**, insert a "**U**" as the last character in the part number.
9. To substitute a **stainless steel bracket,** insert a "**S**" as the last character in the part number.
10. Each **CS Series Cold Shrink Cable Sealing Kit** includes:
    (1) Cold Shrinkable Sleeve
    (2) Mastic Sealing Strips
    (1) Installation Instructions
    For use on Concentric Neutral Cable.
11. For use with tape shield, drain wire, linear corrugated and Unishield® cable.
12. Each **SA Series Kit** includes:
    (1) Cold Shrinkable Sleeve
    (1) Tinned Copper Ground Strap with attached elbow drain wire
    (1) Constant Force Spring
    (1) Semi-Conductive Tape
    (3) Mastic Sealing Strips
    (1) Installation Instructions
13. Probe kit includes probe, installation tool, silicone lubricant and installation instructions.
14. For 200 A loadbreak inserts only.
15. 5 kV cable for luse in 15 kV and 25 kV "CC" size elbow only.
16. Fuses sold separately. See Table 500-110 on page 13. Reference Cat. 240-97.

200 A Loadbreak & Deadbreak Connectors

1. For an elbow **with test point**, add a "**T**" after the conductor code (CC1).
2. For an elbow kit with a **hold down bail assembly** included, insert a "**B**" after the test point option code. 15 kV only.
3. For optional braided ground strap/ bleeder wire for termination tape and wire shielded cable, insert "**GS**" after test point and/or bail option code.
4. To include the **SA Series Cold Shrinkable Metallic Shield Adapters Kit** or **CS Series Cold Shrink Cable Sealing Kit**, add the appropriate suffix "**SA1**", "**SA2**", "**SA3**", "**SA4**" or "**CS1**", "**CS2**", or "**CS3**" to the end of the loadbreak elbow catalog number. Refer to Tables CJ1 and CJ2 on Page 13.
5. For **individually packaged** product in a corrugated cardboard box, insert an "**X**" as the last character in the part number.
6. To order the **long version** (extended) **of the bushing insert**, put in an "**L**" as the seventh character in the part number.
7. Specify the number of **interfaces** by inserting a "**2**", "**3**", or "**4**" directly after the base part number.
8. To add a **stainless steel bracket**, insert a "**B**" as the last character in the part number, or to add **U-straps**, insert a "**U**" as the last character in the part number.
9. To substitute a **stainless steel bracket,** insert a "**S**" as the last character in the part number.
10. Each **CS Series Cold Shrink Cable Sealing Kit** includes:
    (1) Cold Shrinkable Sleeve
    (2) Mastic Sealing Strips
    (1) Installation Instructions
    For use on Concentric Neutral Cable.
11. For use with tape shield, drain wire, linear corrugated and Unishield® cable.
12. Each **SA Series Kit** includes:
    (1) Cold Shrinkable Sleeve
    (1) Tinned Copper Ground Strap with attached elbow drain wire
    (1) Constant Force Spring
    (1) Semi-Conductive Tape
    (3) Mastic Sealing Strips
    (1) Installation Instructions
13. Probe kit includes probe, installation tool, silicone lubricant and installation instructions.
14. For 200 A loadbreak inserts only.
15. 5 kV cable for use in 15 kV and 25 kV "CC" size elbow only.

Clēēr Loadbreak Connector: New 600 Amp Loadbreak Technology Provides Efficient, Reliable Visible Break and Visible Ground

Clēēr Loadbreak Connector System

The Clēēr™ Loadbreak Connector System is a 600 A loadbreak device rated for operation on 15 and 25 kV class systems. It is used to provide a visible break and visible ground on 600 A network and distribution systems without having to remove 600 A terminations and move heavy cable. The Clēēr Loadbreak connector System is fully shielded, submersible and meets the applicable requirements of IEEE Std 386™-2006 standard - "Separable Insulated Connector Systems".

Many configurations are possible with this connector system. Under normal operating conditions, the current path is through one of the 600 A loadbreak/deadbreak 2-position junctions (DLJ6_ _), through the 600 A loadbreak "C" (LCN) connector and through the second 600 A loadbreak/deadbreak junction.

When isolating underground cable, with the system energized or de-energized, with or without rated load current, with the use of a clampstick, the LCN connector can be removed. A 600 A loadbreak protective cap (LPC6_ _) can then be installed on the two exposed loadbreak interfaces. All bushings of the connector system are then insulated and deadfront. If a 600 A termination with a 200 A reducing tap plug is used on the IEEE Std 386™-2006 standard 600 A 15/25 kV deadbreak interfaces of the junction, a grounding elbow can be installed, providing a visible ground. It is then safe to perform work on the underground cable.

Once an underground circuit is sectionalized, for maximum safety, a visible break and visible ground must be achieved prior to performing any repair or maintenance. Distribution feeders can easily retrofit the Clēēr Loadbreak Connector System into 600 A applications, allowing operators confidence when working on a piece of underground equipment or cable as they can clearly see the open circuit.

Clēēr Loadbreak Connectors allow the operator to safely pull the loadbreak interface while the system is energized to sectionalize the system into smaller segments to prevent taking longer outages. The Clēēr 600 A Loadbreak Connector makes this easy:

- The C-shaped connector breaks the circuit in two places for twice the contact separation.
- The new Clēēr Loadbreak Connector incorporates field-proven Cooper Power Systems POSI-BREAK™ technology which provides:
  - Increased strike distance, greatly reducing the possibility of partial vacuum flashovers
  - Added dielectric strength along the probes for superior switching performance and reliability
- The remainder of this simple system consists of:
  - Two Cooper Power Systems 600 A loadbreak interfaces
  - Two IEEE Std 386™-2006 standard 600 A deadbreak interfaces
- A yellow latch indicator is included to assure positive connection
- Fully submersible, and exceeds the applicable requirements of IEEE Std 386™-2006 standard for use in above- and underground environments prone to flooding
- When using BT-TAP or T-OP II connectors a visible ground can be achieved by connecting a grounding elbow directly to a 200 A loadbreak reducing tap plug.

15 kV Class 600 A Clēēr Loadbreak Connector System Ratings

600 A Loadbreak Interface	
Continuous Current	600 A rms
Loadbreak Switching	Ten make and break operations at 600 A at 14.4 kV Phase-Phase
	Three make and break operations at 900 A at 14.4 kV Phase-Phase
Fault Closure	16 kA rms symmetrical at 14.4 kV Phase-Phase after ten 600 A loadbreak switching operations for 0.17 seconds
	16 kA rms symmetrical at 14.4 kV Phase-Phase after three 900 A loadbreak switching operations for 0.17 seconds
4 Hour Overload Current	900 A rms
Short Time Current	16 kA rms symmetrical for 0.17 seconds (limited by fault closure rating)
	10 kA rms symmetrical for 3.0 seconds
IEEE Std 386™ -2006 standard 600 A, 15/25 kV Deadbreak Interface	
Continuous Current	600 A rms
4 Hour Overload Current	900 A rms
Short Time Current	16 kA rms symmetrical for 0.17 seconds
	10 kA rms symmetrical for 3.0 seconds

25 kV Class 600 A Clēēr Loadbreak Connector System Ratings

600 A Loadbreak Interface	
Continuous Current	600 A rms
Loadbreak Switching	Five make and break operations at 600 A at 26.3 kV Phase-Phase
	One make and break operation at 900 A at 26.3 kV Phase-Phase
Fault Closure	10 kA rms symmetrical at 26.3 kV Phase-Phase after five 600 A loadbreak switching operations for 0.17 seconds
	10 kA rms symmetrical at 26.3 kV Phase-Phase after one 900 A loadbreak switching operations for 0.17 seconds
4 Hour Overload Current	900 A rms
Short Time Current	10 kA rms symmetrical for 0.17 seconds (limited by fault closure rating)
	10 kA rms symmetrical for 3.0 seconds
IEEE Std 386™ -2006 standard 600 A, 15/25 kV Deadbreak Interface	
Continuous Current	600 A rms
4 Hour Overload Current	900 A rms
Short Time Current	10 kA rms symmetrical for 0.17 seconds
	10 kA rms symmetrical for 3.0 seconds

Current ratings and characteristics are in accordance with applicable IEEE Std 386™-2006 standard requirements.

Clēēr Loadbreak Connector Assembly (Square SS Bracket).

600/900 A Deadbreak Connectors

Our 600/900 A Deadbreak Connector Systems are designed to fill the demand for a deadfront underground installation in 600/900 A main and lateral feeders. They provide a completely shielded, deadfront, fully submersible cable connection for high-voltage apparatus – such as transformers, switchgear, large motors, etc., and can also be used to make splices, junctions, taps and deadends for main underground, distribution feeders. They provide the same high degree of operating flexibility and reliability as our 200 A products. All components fit together easily and assembly variations are available.

These connector systems are designed for installation on various types of cables. The entire system can be applied to concentric neutral cable, and with our CS & SA Series Shield Adapter Kits to almost any other type of cable.

All of our Deadbreak Connectors meet the electrical, mechanical and dimensional requirements of IEEE Std 386™ standard and are designed to be fully interchangeable with those currently available from other major manufacturers.

900 A RATING

A 900 A continuous rating can be achieved with BOL-T™, BT-TAP™ and T-OP™ II Systems when used with a coppertop compression connector and all copper mating components including apparatus bushing or junction. (See note 1 on page 23 for details when selecting a system.)

BOL-T Connector System

Our BOL-T Deadbreak Connector System is designed for use on applications where the terminations would not be operated after installation, would not need a 200 A interface for grounding or arrester provisions, and would not require direct conductor testing or the use of a hotstick. It is a bolted design that is interchangeable with other manufacturers' bolted 600/900 A systems and requires no special tools for installation.

BT-TAP Connector System

Our BT-TAP Deadbreak Connector System includes a 200 A loadbreak tap instead of the standard insulated plug. The other components of BT-TAP are the same as BOL-T, making it an ideal option to retrofit existing BOL-T (or other bolted systems that use unthreaded compression connectors) systems with a 200 A loadbreak tap for testing, grounding, or overvoltage protection.

T-OP II Connector System

Our T-OP II Deadbreak Connector System also has a 200 A loadbreak tap and has all the advantages of the BT-TAP System. In addition, the T-OP II is single-person hotstick operable, making it ideal for terminations that may require moving or sectionalizing to achieve a visible open or visible ground. The T-OP II design offers added reliability (900 A rated all copper alloy current path and copper top connector) and has several assembly/operating advantages.

PUSH-OP Connector System

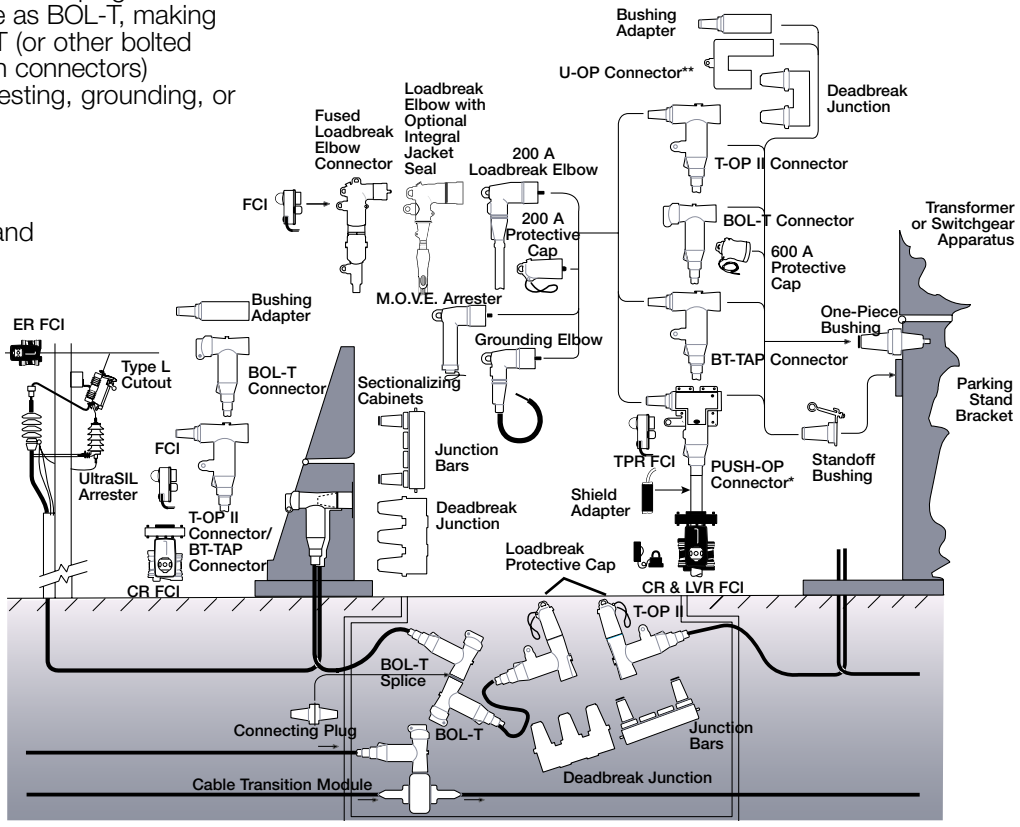
Our PUSH-OP™ Deadbreak Connector System is essentially a T-OP II Termination with a non-bolted design for use on any deadfront apparatus where the terminations may be operated frequently. The PUSH-OP 600 A deadbreak probe and finger

contact design eliminates cross-threading and normal thread wear during repeated sectionalizing operations. It is the only available system that allows operators to move the terminator while it is fully grounded. The PUSH-OP System provides stainless steel bracketry and a mechanical lever for the fastest and easiest one-person hotstick operation possible. The PUSH-OP System requires special apparatus bushings, which makes it suitable for new installations only.

U-OP Connector System

Our U-OP™ Deadbreak Connector System is used with T-OP II and designed to provide a visible break and visible ground without having to move large 600 A cable. The U-OP System requires special apparatus bracketry, which makes it suitable for new installations only.

Note: 600 A Separable Splice kits can be found in the splice section starting on page 36.



* PUSH-OP requires modified bushing and tank hardware.
** U-OP requires frontplate stud provisions. Refer to Installation Instructions S600-14-1 for details.

Catalog Section	Description	kV Class	Base Part Number	Notes

1. Determine whether all aluminum components or all copper components are required:
   BOL-T Kit with **600 A Rating** - Insert "**A**" in digit **10** (digit **9** for **35 kV**) for **Aluminum**.
   BT-TAP Kit with **600 A Rating** - Insert "**A**" in digit **11** (digit **10** for **35 kV**) for **Aluminum**.
   BOL-T Kit with **900 A Rating** - Insert "**C**" in digit **10** (digit **9** for **35 kV**) for **Copper** (includes coppertop compression connector).
   BT-TAP Kit with **900 A Rating** - Insert "**C**" in digit **11** (digit **10** for **35 kV**) for **Copper** (includes coppertop compression connector).
2. To specify an **ALL copper connector**, add **50** to the conductor code from Table CC4 (page 24). **Example**: CC6C11T **becomes** CC6C61T.
3. To specify a **stud**:
   BOL-T Kit - insert a "**1**" in digit **11** to **include** stud, or a "**2**" in digit **11** for kit **without** stud.
   BT-TAP Kit - insert "**S**" in digit **12** to include **standard length** stud or "**L**" in digit **12** to **include extended** length stud.
4. To specify T-Body **with** test point (**optional**):
   BOL-T Kit - insert a "**T**" in digit **12**.
   BT-TAP Kit (**15 & 25 kV**) - insert a "**T**" in digit **13**.
   BT-TAP Kit (**35 kV**) - insert a "**T**" in digit **11**.
5. For T-OP II and PUSH-OP kits only, to specify a T-body with **test point**, add "**T**" after the conductor code.
6. To specify a **BOL-T, BT-TAP or T-OP II** kit with a **loadbreak protective cap**, insert a "**C**" after the test point/non-test point option. **Bushing Adapters** - insert a "**C**" as the last character of the part number. **Note: 25 kV** kits include a **POSI-BREAK protective Cap**.
7. To specify stud in kit, add "**SA**" for **aluminum stud** (only available with aluminum interface); add "**SC**" for **copper stud**; add "**ST**" for **T-OP II stud**; or add "**SU**" for **U-OP stud** as the last characters in the part number.
8. To specify a **grounded standoff bushing**, replace the "I" with a "**G**" as the first character in the part number.
9. For **individually packaged** product in a corrugated cardboard box, insert an "**X**" as the last character in the part number.
10. It is required to specify the number of interfaces by inserting a "**2**", "**3**", or "**4**" directly after the base part number.
11. To add a **stainless steel bracket**, insert a "**B**"; or to add **U-straps**, insert a "**U**" as the last character in the part number.
12. For use with tape shield, drain wire, linear corrugated, and Unishield® cable.
13. To add a **CS Series Sealing kit** or a **SA Series Adapter kit** to the 600 A connector kit, add a "**SA _**" or "**CS _**" at end of catalog number. Refer to Table CJ3 or CJ4 on page 24.
14. Each **SA Series Kit** includes:
    (1) Cold Shrinkable Sleeve (1) Tinned Copper Ground Strap with attached elbow drain wire (1) Constant Force Spring (1) Semi-Conductive Tape (3) Mastic Sealing Strips (1) Installation Instructions.
    Each CS Series Sealing Kit includes:
    (1) Cold shrinkable sleeve, (3) Mastic sealing strips, and (1) Installation Instructions.

			25 kV	**BLRTP625**	12, 13
			35 kV	**BLRTP635**	

1. To specify a **test point** insert a "**T**" in the sixth digit.
2. To add stud to kit, add a "**SA**" for an **aluminum stud**, or a "**SC**" for a **copper stud** as the last characters in the part number.
3. To add **STUD** to kit, add a "**S**" after the base part number. Material of stud supplied will match with material of the plug conductor ordered.
4. Copper alloy stud for use with T-OP II Connectors only.
5. Copper stud for use with U-OP Connector only.
6. To specify an **all copper connector**, add **50** to the conductor code from Table CC4 (page 24). Example: CC6C11T becomes CC6C61T.
7. Stud comes loose in kit, add a "**P**" as the last character for permanent **factory installation**.
8. TQHD6_ allows for installation of either BT-TAP or T-OP II Connector to 600 A bushing.
9. OTTQ6_ allows for installation and single hotstick operation of either the BT-TAP or T-OP II Connector.
10. TWRENCH allows for installation of loadbreak reducing tap plug for BT-TAP or T-OP II Connector.
11. HD6_ allows for installation of connecting plug in 600 A Separable Splices.
12. Specify "A" for 600 A rating or "C" for 900 A rating in digit 9.
13. To add standard length stud to kit, add "**S**" to end of part number. To add an extended length stud to kit add "**L**" to end of part number.

BOL-T Connector System

The BOL-T Deadbreak Connector System is designed for use on applications that will not be operated, do not need grounding or arrester provisions, and do not require direct conductor testing or the use of a hotstick. It is a bolted design that is interchangeable with other manufacturers' bolted 600 A systems that require no special tools for installation.

The capacitive test point on the insulating plug provides a means of confirming an energized circuit without disturbing the bolted connection. In addition to the capacitive test point feature on the insulating plug, we offer a capacitive test point on the T-Body. This allows the use of our Type "TPR" Series Faulted Circuit Indicators, and provides a means of confirming that a circuit is energized when used with high impedance voltage sensing devices designed for test points.

Refer to Figure 1 for BOL-T Connector Kit Components.

Installation of BOL-T on a 600/900 A Bushing

The BOL-T Connector is installed on any 600/900 A bushing using a standard 1-inch socket. No special tools are required.

BOL-T Specification Information

To specify the BOL-T Connector System, include in your specification:

- The system must fully comply with IEEE Std 386™ standard.
- All cable adapters, insulating plugs, compression connectors and other component parts must be interchangeable with other manufacturers.
- For 900 A rating, full copper current carrying path with coppertop compression connector, copper stud and insulating plug with copper insert.
- BOL-T Connector System base part number BT625 for 15 kV and 25 kV systems and BT635 for 35 kV systems.

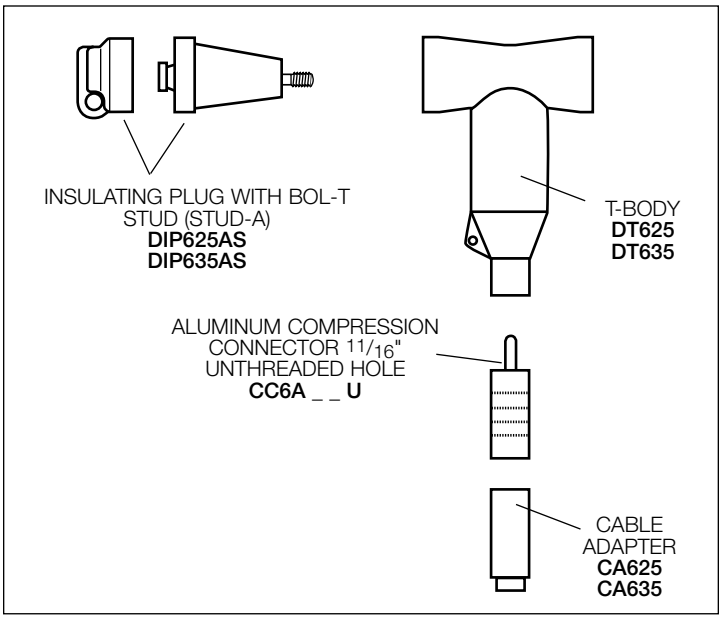

Figure 1.
BOL-T Connector Kit (BT6_5) Components. For more details, see catalog sections 600-10, 600-30 and 600-50.

BT-TAP Connector System

The BT-TAP Deadbreak Connector System is designed for use on applications where a 200 A interface is required for testing, grounding, or overvoltage protection. It is primarily used in retrofit applications of existing 600 A or 900 A BOL-T installations (or other bolted systems that use unthreaded compression connectors).

The BT-TAP Connector System uses the standard unthreaded compression connector, which makes it ideal for retrofitting existing BOL-T installations into a system with a 200 A tap.

The BT-TAP provides the following features:

- Visible ground and visible break
- 200 A Interface for:
  - addition of our M.O.V.E. Arresters for overvoltage protection
  - addition of our Grounding Elbows
  - access for direct conductor phasing and testing
  - hipot testing of switch or cables

Refer to Figure 2 for BT-TAP Connector Kit Components.

Installation of BT-TAP on a 600 A Bushing

The BT-TAP Connector is installed on an apparatus bushing using a 600 A Torque Tool.

BT-TAP Specification Information

To specify a BT-TAP Connector System, include in your specification:

- The system must fully comply with IEEE Std 386™ standard.
- The connector system must provide operation with hot line tools, direct conductor phasing and testing.
- It must provide a location to add overvoltage arresters and access for direct conductor phasing or hipot testing of switch or cables.
- Must be easy to install with proper torque such that concern for cross threading is eliminated.
- Loadbreak reducing tap plug must include latch indicator ring.
- BT-TAP Connector System base part number BTP615 (A) (C) for 15 kV, BTP625 (A) (C) for 25 kV and BTP635 for 35 kV.

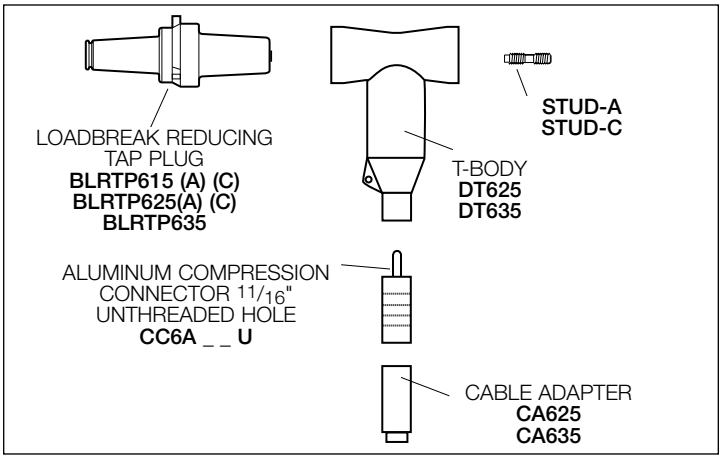

Figure 2.
BT-TAP Connector Kit (BTP6_5_) Components. For more details, see catalog sections 600-15, 600-35 and 600-55.

T-OP II Connector System

The T-OP II Deadbreak Connector System is designed for use on applications where a 200 A interface is required for testing, grounding, or overvoltage protection. It is single person hotstick operable and is ideal for terminations that may require moving to achieve a visible open or visible ground. One person can move the T-OP II Deadbreak Terminator from the apparatus bushing to a standoff bushing using a hotstick and Operating Test and Torque Tool (OTTQ6_5).

The T-OP II Connector System uses a threaded coppertop (bi-metal) compression connector for a threaded connection. It also has an alignment segment and internal rotating nut feature in the loadbreak reducing tap plug which, along with the extended length stud, eliminates cross threading and ensures proper torque.

The T-OP II system provides the following features:

- Single person hotstick operable
- Mechanical assist
- Copper alloy current path and copper-top connector
- 900 A continuous current rating
- Visible ground and visible break
- 200 A Interface for:
  - addition of our M.O.V.E Arresters for overvoltage protection
  - addition of our Grounding Elbows
  - access for direct conductor phasing and testing
  - hipot testing of switch or cables

Refer to Figure 3 for T-OP II Connector Kit Components.

Installation of T-OP II on a 600/900 A Bushing

The T-OP II Connector is installed on an apparatus bushing using a T-Wrench and a 600 A Torque Tool.

T-OP II Specification Information

To specify a 900 A T-OP II System, include in your specification:

- The system must fully comply with IEEE Std 386™ standard.
- Must include an all copper alloy current path and copper-top connector.
- System must include disconnecting back-off feature.
- The connector system must provide operation with live line tools, direct conductor phasing and testing, visible ground and visible break.
- It must provide a location to add overvoltage arresters and access for direct conductor phasing or hipot testing of switch or cables.
- Must be one-person hotstick operable and easy to install with proper torque such that concern for cross threading is eliminated.
- Loadbreak reducing tap plug must include extended length stud, internal rotating nut and an alignment segment feature to eliminate cross threading of this compression connector and ensure proper torque.
- Loadbreak reducing tap plug must include latch indicator ring.
- T-OP II Connector System base part number TP615 for 15 kV, TP625 for 25 kV and TP635 for 35 kV.

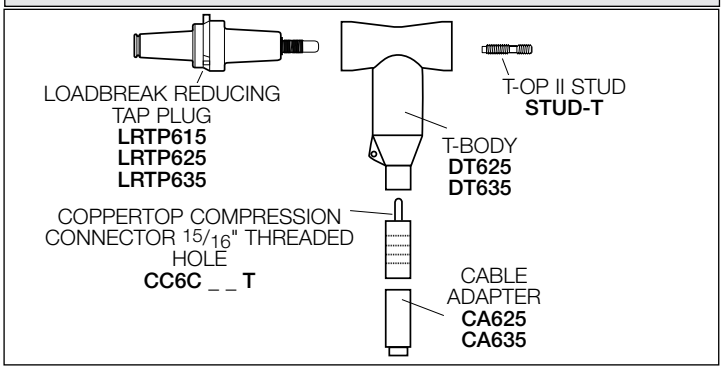

Figure 3.
T-OP II Connector Kit (TP6_5_) Components. For more details, see catalog sections 600-12, 600-32 and 600-52.

U-OP Connector System

The U-OP Connector System is used to provide a visible break and visible ground on 600 A distribution systems without having to move the heavy cable. The U-OP Connector is a deadbreak system rated for operation on 15 or 25 kV class equipment, including transformers, switches, switchgear, and other apparatus.

Under normal operating conditions, the current path is through the apparatus bushing, through the U-connector, through a two-way 600 A deadbreak junction, and through a T-OP II 600 A Connector (sold separately) to the underground cable. When isolating underground cable, a grounded standoff bushing can be put in the parking stand (with the system de-energized). The U-connector can then be removed, rotated 90°, and re-installed over the apparatus bushing and grounded standoff bushing, to ground the apparatus bushing.

A grounding elbow can be installed on the 200 A interface of the T-OP II Connector to ground the cable. A 600 A U-OP Protective Cap can then be put on the upper bushing of the deadbreak junction to insulate that bushing. Since all bushings of the connector system are then insulated or grounded, and if the cable is grounded on the other end, it is safe to perform work on the underground cable. See Figure 4 for a typical U-OP Connector configuration.

U-OP Specification Information

To specify a 600 A U-OP Connector System that achieves a visible break and visible ground without having to move heavy cable, include in your specification:

- The system must fully comply with IEEE Std 386™ standard.
- The system must provide a visible break and visible ground without having to move 600 A cable.
- A U-connection shall remain connected on the equipment even while performing repair to the underground cable to ensure the interfaces are not exposed to the environment and thus potentially contaminated.
- U-OP Connector System base part number UOP625 for both 15 and 25 kV.

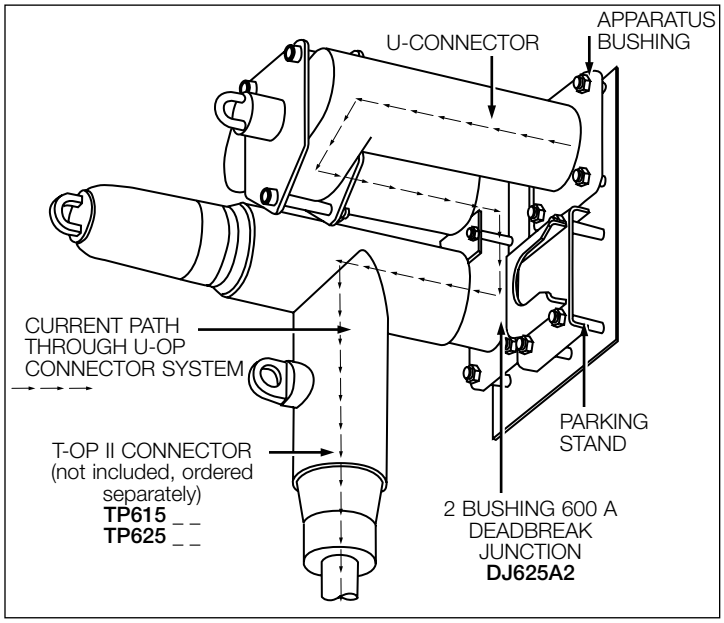

Figure 4.
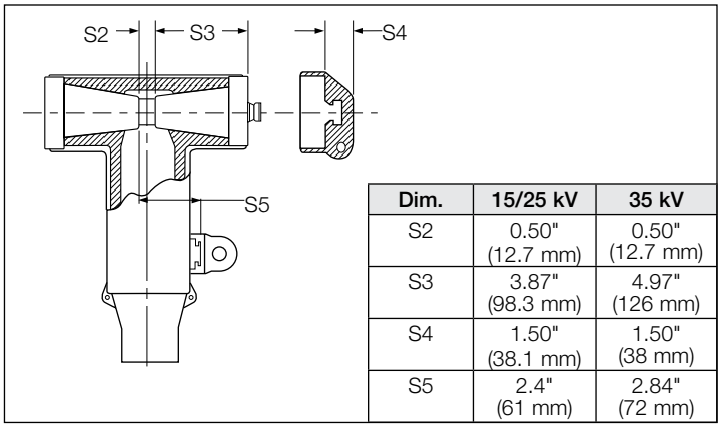
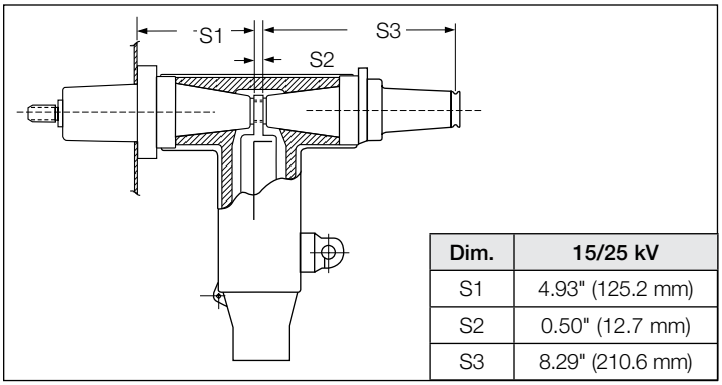
U-OP Connector Kit (UOP625) Components. For more details, see catalog section 600-34.

600 A Stacking Dimensions



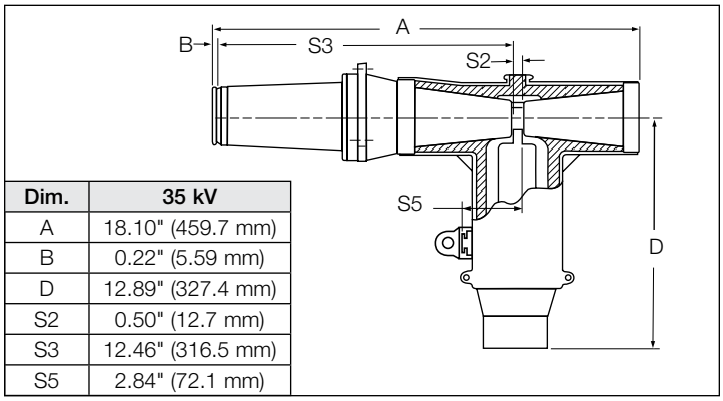
Dim.	15/25 kV	35 kV
S2	0.50" (12.7 mm)	0.50" (12.7 mm)
S3	3.87" (98.3 mm)	4.97" (126 mm)
S4	1.50" (38.1 mm)	1.50" (38 mm)
S5	2.4" (61 mm)	2.84" (72 mm)

BOL-T Deadbreak Connector



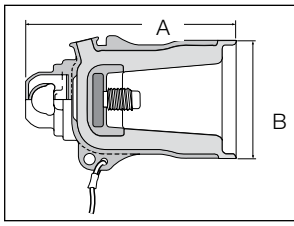
Dim.	15/25 kV
S1	4.93" (125.2 mm)
S2	0.50" (12.7 mm)
S3	8.29" (210.6 mm)

BT-TAP and T-OP II Deadbreak Connector 15 kV and 25 kV



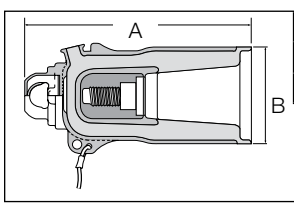
Dim.	35 kV
A	18.10" (459.7 mm)
B	0.22" (5.59 mm)
D	12.89" (327.4 mm)
S2	0.50" (12.7 mm)
S3	12.46" (316.5 mm)
S5	2.84" (72.1 mm)

BT-TAP and T-OP II Deadbreak Connector 35 kV



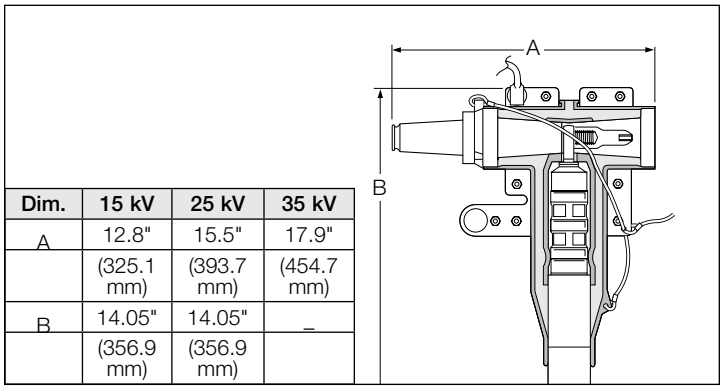
Dim.	15/25 kV	35 kV
A	7.6" (193 mm)	8.66" (220 mm)
B	3.25" (82.6 mm)	3.25" (82.6 mm)

Standard Protective Cap



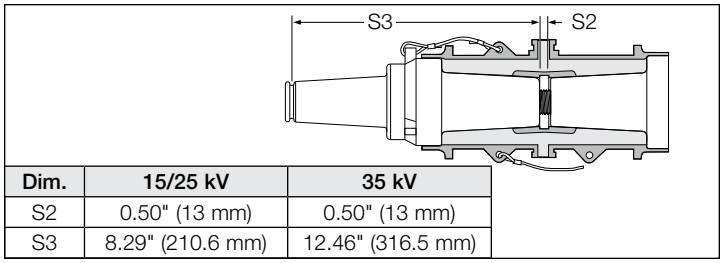
Dim.	15/25 kV	35 kV
A	5.8" (147.3 mm)	6.8" (173 mm)
B	3.25" (82.6 mm)	3.5" (88.9 mm)

Protective Cap for T-OP II and U-OP (15/25 kV shown)



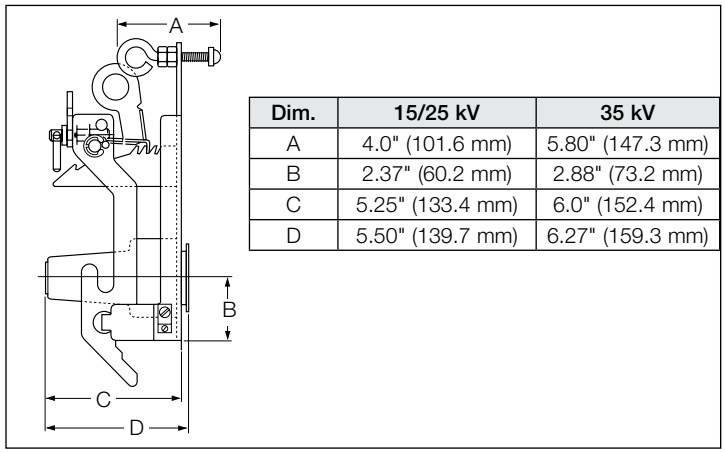
Dim.	15 kV	25 kV	35 kV
A	12.8" (325.1 mm)	15.5" (393.7 mm)	17.9" (454.7 mm)
B	14.05" (356.9 mm)	14.05" (356.9 mm)	–

PUSH-OP Deadbreak Connector (15 kV shown)



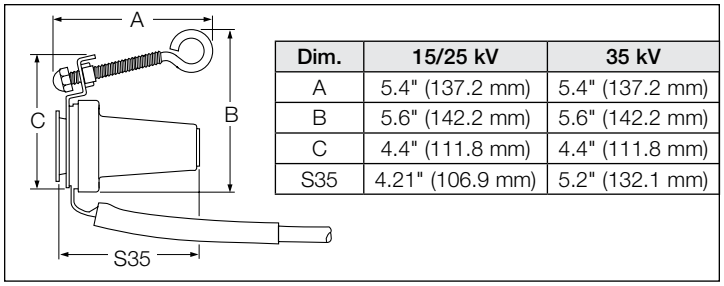
Dim.	15/25 kV	35 kV
S2	0.50" (13 mm)	0.50" (13 mm)
S3	8.29" (210.6 mm)	12.46" (316.5 mm)

Bushing Adapter with LRTP (15 kV shown)



Dim.	15/25 kV	35 kV
A	4.0" (101.6 mm)	5.80" (147.3 mm)
B	2.37" (60.2 mm)	2.88" (73.2 mm)
C	5.25" (133.4 mm)	6.0" (152.4 mm)
D	5.50" (139.7 mm)	6.27" (159.3 mm)

PUSH-OP Standoff Bushing (15/25 kV shown)

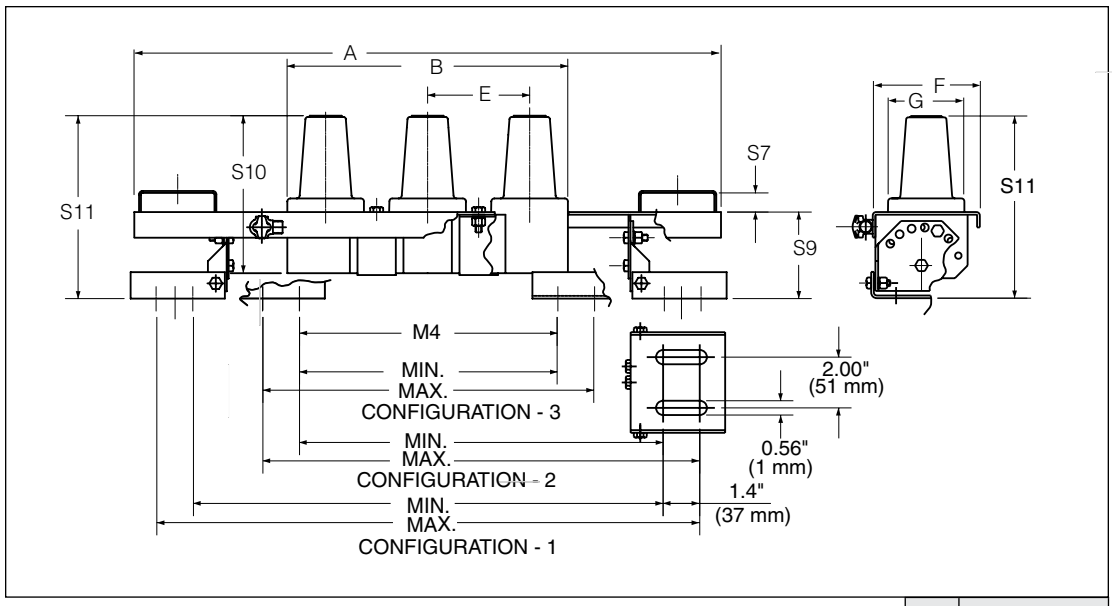


Dim.	15/25 kV	35 kV
A	5.4" (137.2 mm)	5.4" (137.2 mm)
B	5.6" (142.2 mm)	5.6" (142.2 mm)
C	4.4" (111.8 mm)	4.4" (111.8 mm)
S35	4.21" (106.9 mm)	5.2" (132.1 mm)

Standoff Bushing

	15/25 kV
Overall Length Deadend	11.24" (285 mm)
Overall Length 2-Way Splice	19.97" (507 mm)
Overall Length 3-Way Splice	28.70" (729 mm)
Overall Length 4-Way Splice	37.43" (951 mm)
S2	0.50" (12 mm)
S3CP	8.23" (209 mm)
S3IP	3.87" (98 mm)
S4	1.50" (38 mm)
S5	2.40" (61 mm)

Separable Splice



Deadbreak Junction (15/25 kV shown)

Dim.	15/25 kV
E	4.0" (101 mm)
F	4.1" (102 mm)
G	3.0" (76 mm)
S7	0.75" (19 mm)
S9	3.4" (86 mm)
S10	6.2" (157 mm)
S11	7.2" (182 mm)

TABLE 15/25 kV

Number of Interfaces	Physical Dimensions in./(mm)		M4 Mounting Dimensions in./(mm)					
			Configuration 1		Configuration 2		Configuration 3	
	A	B	Min.	Max.	Min.	Max.	Min.	Max.
2	19.0" (483 mm)	7.0" (178 mm)	14.1 " (358 mm)	16.9" (429 mm)	9.7" (248 mm)	12.5" (318 mm)	5.6" (142 mm)	8.4" (213 mm)
3	23.0" (584 mm)	11.0" (279 mm)	18.6" (472 mm)	21.4" (544 mm)	14.2" (361 mm)	17.0" (432 mm)	10.1" (257 mm)	12.9" (328 mm)

TABLE 35 kV

Number of Interfaces	Physical Dimensions in. (mm)		Mounting Dimensions in. (mm)	
	A	B	C	D
2	21.5" (546 mm)	9.0" (229 mm)	15.5" (394 mm	12.5" (318 mm)
3	27.5" (699 mm)	15.0" (381 mm)	21.5" (546 mm)	18.5" (470 mm)
4	33.5" (851 mm)	21.0" (533 mm)	27.5" (699 mm)	24.5" (622 mm)

Note: C and D are minimum and maximum stud centerline separations for mounting.

Junction Bars/Cable Transition & Oil Stop Modules

Cooper Power Systems Junction Bars are designed for vault or apparatus applications and can be used for looping, tapping, and sectionalizing.

Cable Transition Modules (CTMs) and Oil Stop Modules (OSMs) are designed for splicing paper insulated lead cable (PILC) into solid dielectric cable.

Junction bars and cable transition modules are fully shielded, submersible, resistant to harsh materials, and are designed and manufactured in accordance with IEEE Std 386™ standard - "Separable Insulated connector Systems".

Junction bars and cable transition and oil stop modules are manufactured in 200 A, 600 A or 900 A configurations. The 200 A designs incorporate a universal bushing well design making it possible to use either a 200 A loadbreak or deadbreak bushing well insert.

Junction Bar Catalog Numbering Key

"JBI" = Junction Bar, In-Line
"JBL" = Junction Bar, "L" Splice
"JBY" = Junction Bar, "Y" Splice
"JBS" = Junction Bar, Stacked
"25" = 15/25 kV Rating
"35" = 35 kV Rating***
"335" = Three-Phase, 35 kV Rating
"U" = With U-Straps
"PS" = Bracket with (2) Parking Stands
"W" = 200 A Well
"B" = 600 A Bushing
"S" = 600 A Straight Interface Bushing
"C" = Copper

Available Mounting Provisions

Junction Type	S.S. Mtg. Bracket 0-60° Mtg. Angles	Non-Adjustable S.S. Flush Mtg. Bracket	S.S. U-Straps*	S.S. Mtg. Bracket with (2) Parking Stands**
In-Line Junction Bar	Std.		Yes	Yes
Stacked Junction Bar		Std.	**No**	Yes
"L" Splice	Std.		Yes	Yes
"Y" Splice		Std.	No	**No**

* For U-straps add suffix U on the end of the standard catalog number.
** For Parking Stand Bracket add suffix PS on the end of the standard catalog number.

15/25 and 35 kV In-Line Junction Bars with Stainless Steel Bracket

1. For U-Straps, add **"U"** on end of catalog number.
2. For (2) parking stand brackets add **"PS"** to end of catalog number.

* A 900 A rating can be achieved when mated with comparably rated seperable connectors.

15/25 kV and 35 kV L-Splices and Y-Splices with Stainless Steel Brackets

1. for U-Straps, add **"U"** on end of catalog number.
2. For (2) parking stand brackets add **"PS"** to end of catalog number.

Catalog Section	Description	kV Class	Base Part Number	Notes

1.Cable Lug Size required at time of order.

We offer various types of splices for your underground needs on 200 A and 600 A systems. The EZ II One-Piece Splices at 15, 25, and 35 kV include advantages for typical applications of repair, replacement, or extension of high voltage underground cables. These all peroxide-cured EPDM rubber splices provide a highly reliable, permanent, fully shielded, and submersible cable joint with a current rating equal to that of the mating cable. EZ II Splices can be installed in conduit, direct buried or in vault applications. The EZ II Splice line meets or exceeds all requirements of IEEE Std 404™ standard.

We offer a full line of 600/900 A Separable Splice kits for application on feeder circuits. These use standard BOL-T type components along with a peroxide-cured EPDM rubber connecting plug that allows for installation of multiple way splices. Separable splices are used to splice multiple cables or to deadend a single cable. The splices are rated for 600 A (900 A ratings are available) and are suitable for the repair or extension of underground feeders. Separable splice kits meet or exceed the requirements of IEEE Std 386™ standard.

EZ II Splices

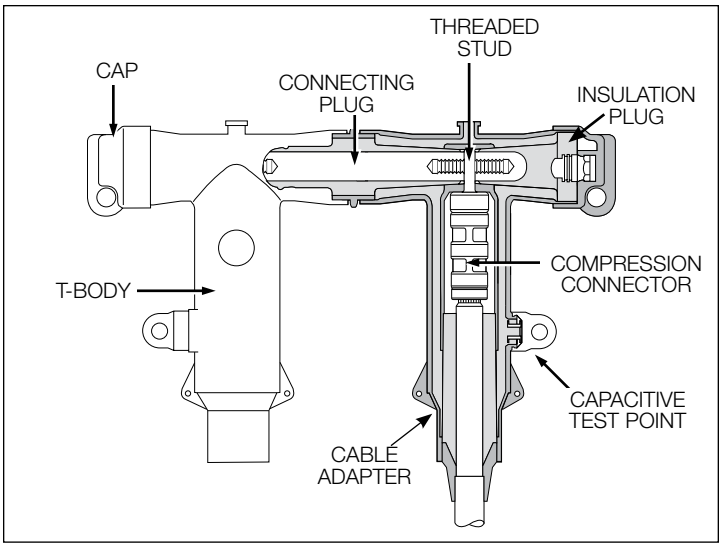
The EZ II One-Piece Splices offer a number of features and benefits, including:

Easiest to Install – The design features of the EZ II Splice including the tapered cable entrance, smooth bore, relieved conductive insert, and reformulated rubber provide for easier field installation. EZ II Splices have been shown to be 30% easier to install than other manufacturers' splices.

Wide Range Taking – The wide range taking cable entrances are sized to accept all common cable insulation diameters. The wider cable ranges increase installation flexibility.

Sure Grip – The contoured EZ II Splice body provides an easy gripping location during installation.

Long Term Reliability – The EZ II Splice has successfully passed all requirements of the IEEE Std 404™ standard and our exclusive field-proven multi-stress test to show the long term reliability of the design.



Typical components of a 600 A 2-way separable splice.

EZ II Splice Specification Information

To ensure you have the most reliable, economical, installation friendly premolded one-piece splice available, your specification for EZ II Splice should include:

- Manufactured in full compliance with all applicable IEEE Std 404™ standard.
- Manufactured from peroxide-cured EPDM rubber.
- Tapered ribs of the inside diameter of the conductive insert.
- Molded in compression connector diameters.
- Conductive insert ends encapsulated with insulating rubber.

		T-OP II 4-way Splice Kit	**SSPLT635A4**	5, 6, 7, 8, 9

1. For an **all copper connector**, change digit six from a "0" to a "**C**".
2. For a **splice with a single-piece** rejacketing kit, insert a "S" or a **2-piece** rejacketing kit, insert a "**D**" as the ninth character in the part number.
3. For **individually packaged** product in a corrugated cardboard box, insert an "**X**" as the last character in the part number.
4. To splice different sized cables, refer to transition splice information in catalog section 700-15.
5. For **900 A rating** (copper components) replace the "A" with a "C".
6. For T-bodies with **test points**, insert a "**T**" directly after the base part number.
7. Studs are bagged and loose in kit. To have **studs permanently installed** at the factory, add a "P" after the test point designation (if applicable) or after the base part number.
8. Installation requires a standard $^{5}/_{16}$" hex key (HD625).
9. To include **200 A loadbreak protective cap**, add a "C" as the last character in the part number.

Underground Surge Arresters

Our Metal Oxide Varistor Elbow (M.O.V.E.) and Parking Stand Arresters are used in pad-mounted transformer and entry cabinets, vaults, switching enclosures and other installations to provide shielded deadfront arrester protection. These arresters are designed for use with 200 A loadbreak interfaces to limit overvoltages to acceptable levels, protect equipment and extend cable life.

POSI-BREAK M.O.V.E. Elbow Arrester

The POSI-BREAK M.O.V.E. Arrester provides the same safety benefits of the POSI-BREAK connector system with over-voltage protection. Cooper Power Systems is the only manufacturer to offer a solution to the partial vacuum flashover in elbow arresters.

The POSI-BREAK M.O.V.E. Arrester is available for 9-21 kV for 25 kV class interfaces.

M.O.V.E. DirectConnect Elbow Arrester

M.O.V.E. DirectConnect Elbow Arresters are used on underground systems in pad-mounted transformer and entry cabinets, vaults, switching enclosures and other installations to provide shielded deadfront arrester protection. They are designed for use with 600 A, 35 kV Class deadbreak interfaces that conform to IEEE Std 386™ standard to limit overvoltages to acceptable levels, protect equipment and extend cable life.

M.O.V.E. DirectConnect Elbow Arrester Specification Information

Design Tests

- IEEE Std 386™-2006 standard, Separable Insulated Connector Systems
- IEEE Std C62.11 standard, Metal Oxide Surge Arresters for AC Power Circuits

DirectConnect Elbow Arrester.

TABLE 1
Commonly Applied Voltage Ratings of M.O.V.E. and Parking Stand Arresters

System Voltage (V rms)		Commonly Applied Arrester Duty-cycle (MCOV) Voltage Rating (kV rms) on Distribution Systems		
Nominal Voltage	Maximum Voltage	4-Wire Multigrounded Neutral Wye	3-Wire Low Impedance Grounded	Delta and 3-Wire High Impedance Grounded
2400	2540	–	–	3 (2.55)
4160 Y/2400	4400 Y/2540	3 (2.55)	6 (5.1)	6 (5.1)
4260	4400	–	–	6 (5.1)

36	29	116	95.3	103	110	120	137

* Equivalent front-of-wave voltage is the expected discharge voltage of the arrester when tested with a 5 kV current surge cresting in 0.5 µs.

Tools & Maintenance

Cooper Power Systems, Kearney operation offers a wide variety of Hi-Line™ Tools and maintenance equipment including Insulated Sticks, Fit-On™ Tools, Tree Trimmers, Fuse Pullers, Cover-up Equipment, Jumpering/Grounding Equipment, Compression Tools, Cutters and Accessories.

Kearney also offers a wide range of connectors. Products include:

- Aqua Seal™ and Airseal™ Insulating and Sealing Material
- Compression Squeezon™ Connectors, Tee-Taps, Stirrups, Terminals, Grounding Lugs, Spacers
- Secondary Terminal Connnectors, and a wide variety of sleeves

1. For an **insulated head**, insert a "**-3**" between the "2" and the "F". Example: 0-62-3F.
2. For an **insulated head**, replace the "**1**" with a "**2**".
3. For an **insulated head**, replace the "50" with a "**53**".
4. To include "D" insert die, add a "**B**" as the last character in the part number.
5. For an **insulated head**, insert a "**-3**" between the "3" and the "F" Example: 0-63-3F.
6. Consult customer service for availability.
7. For an **insulated head**, insert a "**-3**" between the "0" and the "F". Example: 0-620-3F.
8. Accepts Burndy® Type "W" dies.
9. For an **insulated head**, insert a "**-3**" between the "5" and the "F". Example: 0-65-3FB.
10. For an **insulated head**, insert a "**-3**" between the "8" and the "F". Example: 0-68-3FB.
11. For **tool without case**, insert a "**K**" as the first character in the part number.
12. For tool with **18" handles**, add a "**-18**" at the end of the part number or for **24" handles**, add a "**-24**".
13. Case fits standard tool with 12" handles.
14. To add a **complete set of die holder assemblies**, insert a "**K**" as the first character in the part number.

3. Single kit with (1) elbow with 2/0 cable, (1) portable feedthru, (1) protective cap and (1) test probe in a carrying bag.
4. Triple kit with (3) elbows with 1/0 cable, (3) portable feedthrus, (3) protective caps and (1) test probe in a carrying bag.
5. Triple kit with (3) elbows with 2/0 cable, (3) portable feedthrus, (3) protective caps and (1) test probe in a carrying bag.
6. Other material sizes available.

Bushings

Cooper Power Systems has a full line of one-piece bushings, bushing wells, bushing well inserts, and feed-thru inserts for installation on transformers and/or sectionalizing cabinets. The 15 kV and 25 kV class bushing inserts use a knurled piston providing maximum copper-to-copper current transfer and maximum thermal stability. After fault close operation, it locks the piston in the outward position, providing a visible indication against dangerous repetitive fault closure.

Type Primary Bushings	Current Rating (A)	Voltage Rating (kV)
Bushing wells	200	15, 25, 35
Integral loadbreak bushing 3Ø rated	200	35
Deadbreak apparatus bushing	600	15/25, 35
Deadbreak PUSH-OP Apparatus Bushing	600	15/25, 35

200 A Integral Loadbreak Bushing Specification Information

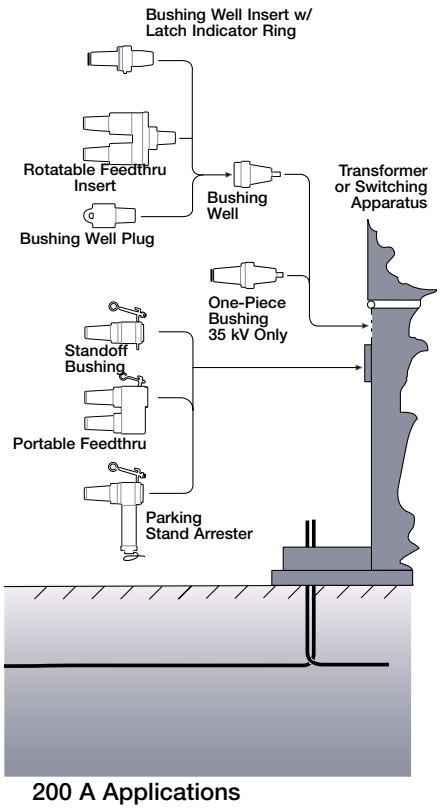
- 200 A, 35 kV three-phase rated integral load-break bushing meeting the requirements of IEEE Std 386™ standard No. 1A (large 35 kV class interface).
- Voltage and current ratings in accordance with IEEE Std 386™ standard.

600 A PUSH-OP Deadbreak Bushing Specification Information

- 600 A Deadbreak Apparatus Bushing shall be compatible with Cooper 600 A PUSH-OP Connectors.
- Complete with plated copper finger contacts to accept PUSH-OP probe, to achieve a non-bolted connection.
- Voltage and current ratings in accordance with IEEE Std 386™ standard.

200 A HTN Tri-Clamp Bushing Well Specification Information

- Molded-In Semi-Conductive Shield.
- 35 kV, 150 kV BIL.
- HTN Material.
- Removable stud shall have provisions for easy removal of broken parts from both the bushing well and insert.
- Voltage and current ratings in accordance with IEEE Std 386™ standard.



200 A Applications

1. Clamp must be ordered separately.
2. Bushing includes gasket and shipping cap.
3. Clamp and gasket must be ordered separately.
4. Clamp, gasket and bracket assembly must be ordered separately.
5. For **35 kV (150 kV BIL)** add "**S**" to end of the part number.
6. Latch handle standard on left side. For **latch handle on right side**, change digit 10 from a "3" to a "**5**".

Cooper Power Systems offers fuses under multiple tradenames: Cooper, Kearney, McGraw-Edison and Combined Technologies™. We have the broadest range of overcurrent protective devices to meet your application needs.

Bay-O-Net Fuse Assembly

In the late 1960s, we introduced the Bay-O-Net Assembly and links to the industry for pad-mounted transformer protection. The Bay-O-Net Fuse has grown into the industry standard protection package for single- and three-phase transformers. The assembly combines the ease of hotstick operation with the safety of deadfront construction and is used with an isolation link to prevent line personnel from closing into a fault when replacing a blown Bay-O-Net Link. Alternately, a back-up, current-limiting fuse can be used in place of the isolation link to increase interrupting ratings to 50 kA.

Flapper™ Valve Bay-O-Net Assembly Specification Information

- Bay-O-Net Assembly shall include a valve that will shut when the inner holder is removed from the housing and minimize oil from spilling out of the Bay-O-Net Assembly.

TransFusion™ Coordination Program

This free, web-based, easy-to-use coordination tool makes transformer protective device selection for pad-mounted transformers effortless. By simply inputting a few pieces of data and selecting the desired level of protection, you can quickly find the right Cooper Power Systems ELSP fuse, Bay-O-Net fuse, or MagneX interrupter for your application. The TransFusion Coordination Program provides you the flexibility of trying various combinations before deciding on the one that best fits your application needs. A simple click of the print button allows you to print your TCC curves and part numbers.

Go to this site for your coordination program www.coopertransfusion.com.

MagneX Single-Phase Interrupter

The MagneX™ single-phase interrupter offers a solution to the utility wanting to eliminate oil exposure in the field when operation occurs due to transformer overloads. There is no need for replacement fuse links, resulting in economic value to the user. In addition, a MagneX interrupter in series with a back-up, current-limiting fuse offers additional protection.

TABLE 1
Voltage Ratings and Characteristics

Description	Rating
Impulse 1.2x50 Microsecond Wave	150 kV
60 Hz-1 Minute Voltage Withstand	50 kV
Continuous Current Rating	42 A
Switching Load Currents, 200 Times	42 A
Magnetizing Current Switching	200 Times

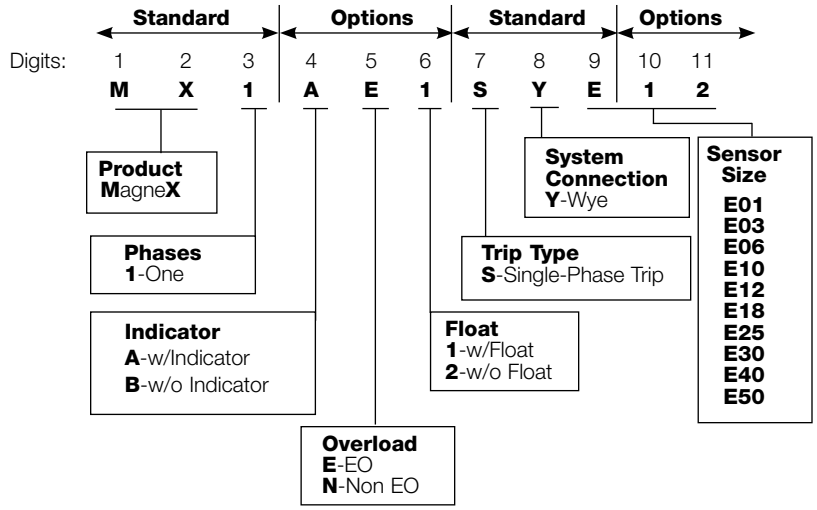
Continuous current ratings and dielectric testing are in accordance with ANSI/IEEE Std C57.12™ standard. Switching and Fault Close IEEE Std C37.41™ standard. Overload Protection IEEE Std C57.41™ standard.

TABLE 2
Interrupting Rating

Voltage kV-LG	RMS Symmetric (A)	RMS Asymmetric (A)
8.3	2800	4200
15.5	1500	2250
23.0	500	750

TABLE 3
MagneX Significant Digit Catalog Number System

Example: To order a single-phase MagneX interrupter without indicator, single-phase trip, with float and E12 sensor, the catalog number would be **MX1BN1SYE12.** (Refer to Catalog Section 240-34.)



To select the correct isloation link, use Table 1 to cross reference the isolation link to the selected MagneX sensor. **An isolation link is required if the MagneX is not in series with a current-limiting fuse.**

TABLE 4
Isolation Link – MagneX Correlation Chart

Sensor Number	Isolation Link
E01	**3637803B01**
E03	**3637803B08**
E06	**3637803B02**
E10	**3637803B09**
E12	**3637803B10**
E18	**3637803B03**
E25	**3637803B03**
E30	**3637803B05**
E40	**3637803B05**
E50	**3637803B05**

ORDERING INFORMATION

Use Table 6 to determine the correct MagneX interrupter suffix (sensor number) for the application.

Use Table 3 to determine the catalog number.

When ordering a MagneX interrupter with a standard handle, a hardware kit must be ordered separately. Use Table 7 to determine the hardware kit catalog number.

To select the correct isolation link, use Table 4 to cross reference the isolation link to the selected MagneX interrupter. **An isolation link is required if the MagneX is not in series with a current-limiting fuse.**

Example – MagneX interrupter with an emergency overload, indicator, and a float in series with an ELSP Current-Limiting Fuse for a single-phase, 7.2 kV phase-to-ground, 25 kVA transformer, specify:

1 – 40 A ELSP Fuse 3543040M61M
1 – MagneX interrupter MX1AE1SYE06
1 – Hardware Kit (with Emergency Overload, indicator, and no adaptor) 3638535A05

See the following Catalog Sections for further information:

ELSP Fuse Holder 240-53

ELSP Current-Limiting Backup Fuse 240-98

MagneX with Current-Limiting Fuse

To order a MagneX interrupter and current-limiting fuse combination, see Table 5.

TABLE 5
Hardware Kits

Description	Catalog Number
Without emergency overload	**3638535A04**
With emergency overload	**3638535A05**
With adaptor without emergency overload	**3638535A07**
With adaptor with emergency overload	**3638535A08**
Hotstick adaptor only	**3639585A01**

Using TCC Curves

To determine or confirm the MagneX interrupter will coordinate with upstream and down stream system requirements, use the time-current characteristic curves (See R240-91-310). For full size TCC curves, contact your Cooper Power systems representative.

MagneX with hotstick adapter and indicator

Notes:
Recommendations are based on:
- Minimum trip curves, and Maximum trip and clear curves, R240-91-310.
- Deration factor of 0.5% per °C above 25 °C.
- Allowable loading greater than 140% for four hours in accordance with IEEE Std C57.91™-1981 standard Guide for Loading Distribution Transformers, Table 6.

167 kVA ELSP Rating with Emergency Overload MagneX Element	- -	180 E50	150 E40	80 E18	80 E18	50 E12

Notes:
Table shows minimum recommended ELSP Fuse ratings. Recommended ELSP Backup Fuse (described in Catalog Section 240-98) will coordinate with the MagneX interrupter and melt on internal transformer faults. The MagneX interrupter recommendations are based on:
- Minimum trip curves, and Maximum trip and clear curves R240-91-310.
- Deration factor of 0.5% per °C above 25°C.
- Allowable loading greater than 140% for four hours in accordance with IEEE Std C57.41™-1981 standard guide for Loading Distribution Transformers, Table 6.

The Three-Phase MagneX interrupter offers a solution to the utility wanting to eliminate oil exposure in the field when operation occurs due to transformer overloads. There is no need for replacement fuse links, resulting in economic value to the user. In addition, a MagneX interrupter in series with a back-up, current-limiting fuse offers additional protection.

MagneX Interrupter Specification Information

- Breaker shall be installed on the primary side of transformer.
- Breaker shall have the capability to energize and de-energize the 3Ø transformer by one hotstick operation.

TABLE 1
Voltage Ratings and Characteristics

Description	kV	Rating
Impulse 1.2x50 Microsecond Wave	150 kV	-
60 Hz-1 Minute Voltage Withstand	50 kV	-
Continuous Current Rating	-	42
Switching Load Currents	-	42

Continuous current ratings and dielectric testing are in accordance with IEEE Std C57.12™ standard.
Switching and Fault Close IEEE Std C37.41™ standard.
Overload Protection IEEE Std C57.41™ standard.

TABLE 2
Interrupting Rating

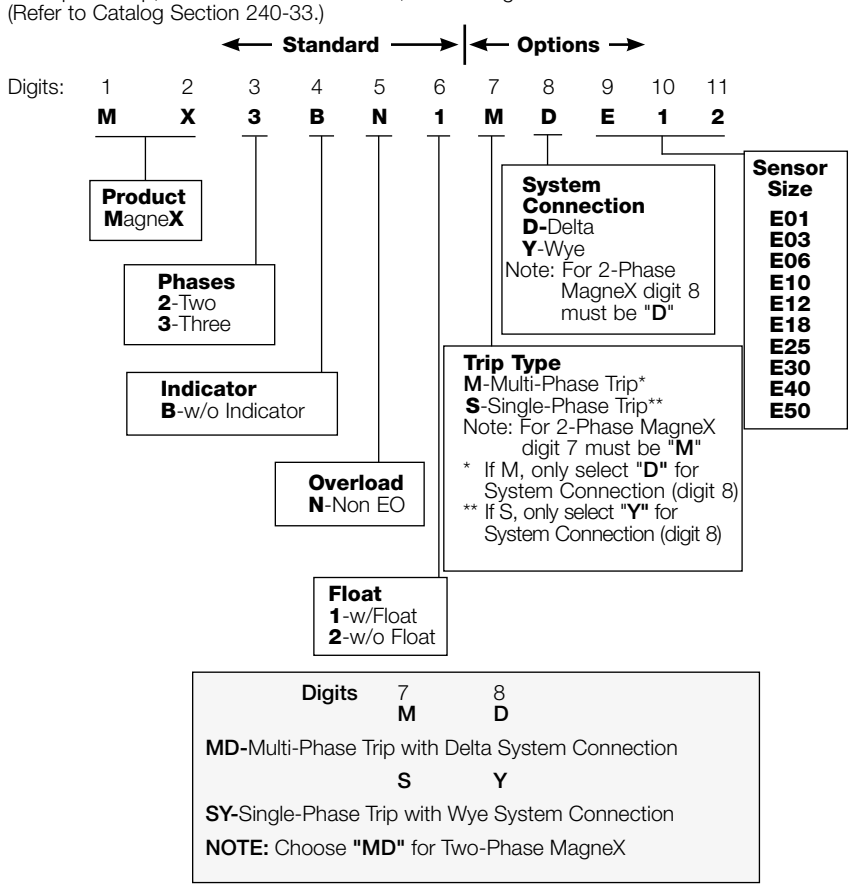
Voltage kV-LG (A)	RMS Symmetric (A)	RMS Asymmetric (A)
8.3	2800	4200
15.5	1500	2250
23.0	500	750

TABLE 3
Hardware Kits

Description	Catalog Number
Standard Handle Kit & Hardware without Emergency Overload	**3638535A09**
Hotstick Adapter	**3639585A01**

TABLE 4
MagneX Significant Digit Catalog Number System

Example: To order a two- or three- phase MagneX interrupter without indicator, single- and three-phase trip, with float and E12 sensor, the catalog number would be **MX3BN1SYE12.** (Refer to Catalog Section 240-33.)



ORDERING INFORMATION

Use Table 4 to determine the catalog number.

When ordering a MagneX interrupter with a standard handle, a hardware kit must be ordered separately. Use Table 3 to determine the hardware kit catalog number.

TransFusion™ Coordination Program

This free, web-based, easy-to-use coordination tool makes transformer protective device selection for pad-mounted transformers effortless. By simply inputting a few pieces of data and selecting the desired level of protection, you can quickly find the right Cooper Power Systems ELSP fuse, Bay-O-Net fuse, or MagneX interrupter for your application. The TransFusion Coordination Program provides you the flexibility of trying various combinations before deciding on the one that best fits your application needs. A simple click of the print button allows you to print your TCC curves and part numbers.

Go to this site for your coordination program www.coopertransfusion.com.

TWO- AND THREE-PHASE MAGNEX INTERRUPTER OPERATION

Figure 1 demonstrates the circuit diagram for the three-phase MagneX interrupter with single-phase sense, single-phase trip. The three-phase MagneX interrupter with single-phase sense, single-phase trip contains one sensors per phase. It reacts to fault currents on one phase and will cause tripping of that phase only. The MagneX interrupter then can be reset via the single operating handle by opening all three phases and closing all phases back in simultaneously.

Figure 2 demonstrates the circuit diagram for the three-phase MagneX interrupter with single-phase sense, three-phase trip, containing one sensor in two of the three phases. This product should only be applied to delta-connected primary transformers, where any fault current flow in one phase will also flow in an adjacent phase. It reacts to fault currents on one phase and will cause tripping of all three phases. The MagneX interrupter then can be reset via the single operating handle by opening all three phases and closing all phases back in simultaneously.

The three-phase MagneX interrupter with single-phase sense, three-phase trip should always be used in series with at least one backup current-limiting fuse in each of the three phases.

The backup current limiting fuses (see ELSP catalog section 240-98) provide high-current interruption capability.

Figure 3 shows the circuit diagram for the two-phase MagneX interrupter. The two-phase MagneX interrupter was specifically designed for single-phase, two bushing transformers, where disconnection of both bushings is desired following fault/overload detection. The MagneX interrupter will react to a fault sensed in either leg of the transformer primary. Interruption takes place in both interruption chambers simultaneously, disconnecting both legs of the transformer from the circuit.

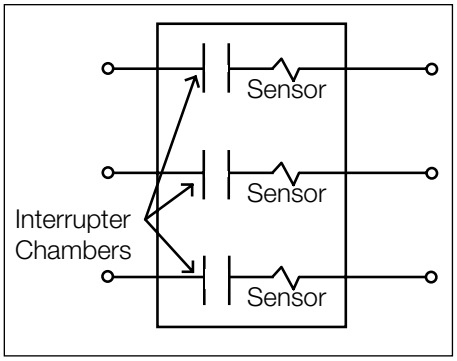


Figure 1.
Three-phase MagneX interrupter, single-phase sense, single-phase trip.

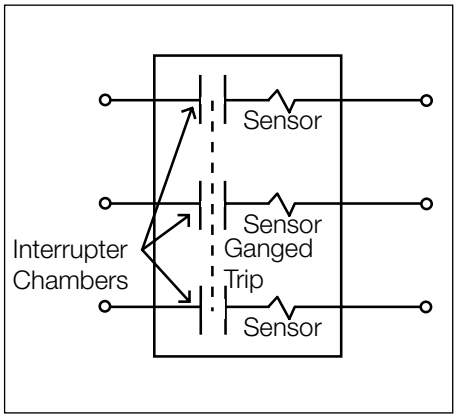

Figure 2.
Three-phase MagneX interrupter, single-phase sense three-phase trip.

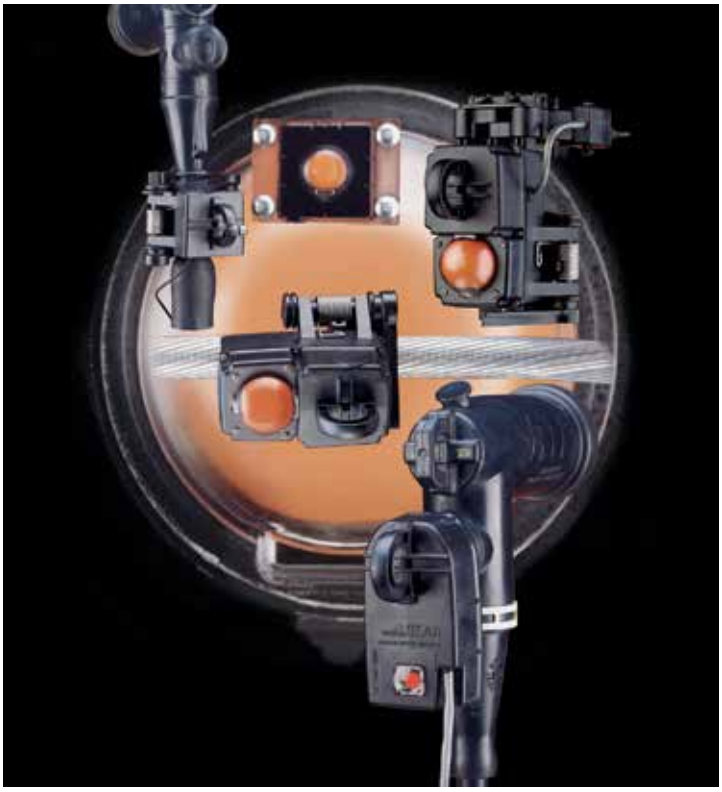
Faulted Circuit Indicators

Cooper Power Systems offers a wide variety of faulted circuit indicators (FCIs) ranging from basic circuitry models in the Delayed Reset style to the more sophisticated circuitry of the Test Point Reset and Electrostatic Reset types. Our S.T.A.R.™ Faulted Circuit Indicator product line offers six basic types of FCIs and each unit is tailored to be the most reliable for the intended application. Each type varies by reset method and the type of system it connects to.



Standard S.T.A.R. features include:

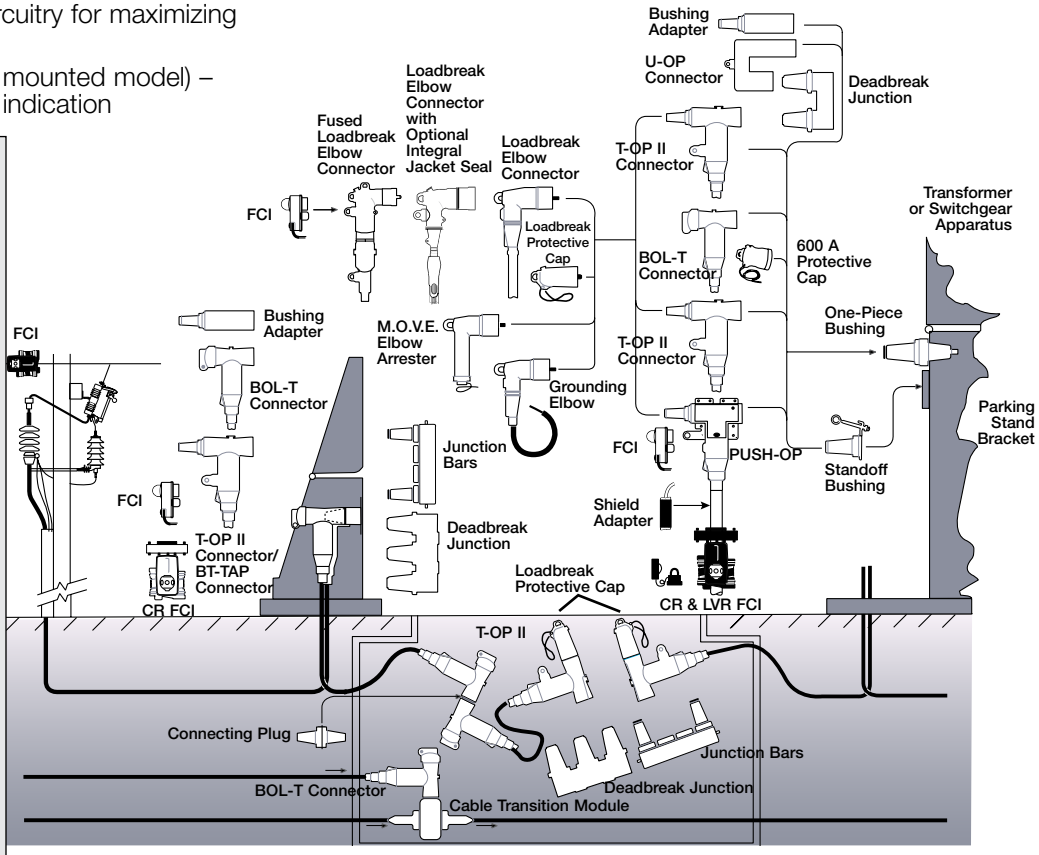
- **LO/HI Trip Rating Selection** – Innovative trip ratings greatly simplify FCI selection application
- **Current Transformer Sensing Design** – For maximum trip accuracy and elimination of false tripping on adjacent cable events
- **Inrush Restraint** – Eliminates false tripping by ignoring inrush currents caused by reclosing operations of protective devices on the system. A dead time of 200 ms will activate the inrush restraint feature.
- **Low-Pass Filter Technology** – Prevents false tripping due to capacitive cable discharge
- **Design Tested to IEEE Std 495™ standard and Manufactured in ISO 9001 Facility** – To ensure highest performance and quality

In addition to the above features, the Pathfinder™ FCIs include:

- **Variable Trip Technology** – Single trip rating for one-size-fits-all application
- **Auto Adjusting Trip Technology** – Detects average load current over time above or below 75 A and adjusts trip rating to 200 A or 800 A automatically.
- **Self Adjusting Reset Restraint** (test point mounted model) – "Learns" your system voltage and won't allow false resetting due to backfeed voltage
- **BLOC**™ – Battery Life Optimization Circuitry for maximizing battery life
- **Remote Fiber Optic Cable** (test point mounted model) – Optional remote for convenient remote indication

Pathfinder Test Point Faulted Circuit Indicator Specification Information

- Fault indication on minimum 200 A di/dt within 100 ms (variable trip).
- Response time of 3 ms or less, for coordination with current-limiting fuses (fixed trip).
- Inrush restraint to prevent false tripping due to current inrush conditions.
- Low pass filter specifically tuned to prevent false tripping on high frequency transients, but to allow proper indication on systems using current-limiting fuses.
- Temperature compensation for accurate and reliable performance over a temperature range of -40 °C to +85 °C.
- Reset restraint to prevent false reset due to excessive voltage feedback levels up to 80% of nominal system voltage (STVT).
- Installation using single hotstick.



For 15 kV, 25 kV and 35 kV Class

Product/Feature unique to the Cooper Power Systems S.T.A.R. Faulted Circuit Indicators

Sectionalizing Cabinets

Our single- and three-phase SecTER™ Sectionalizing Cabinets and single-phase sectionalizing pedestals are designed as cable sectionalizing centers, or as permanent or temporary transformer pad covers.

The aesthetic low profile design provides unobtrusive installations for sectionalizing, tapping, or terminating underground cable. They are available in various sizes for use on 15 kV through 35 kV, 200 A or 600/900 A single-phase and three-phase rated systems. For highly corrosive environments, either stainless steel or aluminum is also available. Heavy mild steel gauge designs along with a continuous seam welding ensures a sturdy, smooth, long lasting cabinet.

Universal mounting plates with optional our two-, three- or four-way junctions can be factory installed. Junction installations are available in either 200 A or 600 A versions.

SecTER features:

- Munsell Green, TGIC powder paint finish
- Designed for easy one-person opening and improved access to interior terminations
- Door stop prevents accidentally closing
- Seams are designed to exceed ANSI tamperproof standards
- Optional installed junctions

SecTER Specification Information

To capitalize on the benefits of our SecTER Sectionalizing Cabinets, include the following information in your specification:

- Diagonally cut removable cover and cabinet.
- Munsell Green TGIC powder paint finish.
- All welded, continuous seam construction.
- Cooper Power Systems 200 A or 600/900 A junctions or junction bars installed.

Notes:
1. For **stainless steel tank** change the "A" in digit 12 to a "**S**". For **aluminum** tank change the "A" in digit 12 to a "L".
2. Width and depth dimensions must be matched to corresponding SecTER dimensions.
3. To **change width** of fiberglass ground sleeve, change digit 11 from a "2" to a "**3**" for **30" width**, to a "**4**" for **36" width**.
4. To **change width** of fiberglass ground sleeve, change digit 11 from a "5" to a "**6**" for **30" width** and to a "**7**" for **36" width**.
5. To **change width** of steel ground sleeve, change digit 10 from a "0" to a "**1**" for **30" width** and a "**2**" for **36" width**.
6. To **change width** of fiberglass ground sleeve, change digit 11 from a "4" to a "**5**" for **66" width** or to a "**6**" for **84" width**.
7. To **change width** of fiberglass ground sleeve, change digit 11 from a "7" to a "**8**" for **66" width** or to a "**9**" for **84" width**.
8. To **change width** of steel ground sleeve, change digit 10 from a "7" to a "**8**" for **66" width** or a "**9**" for **84" width**.
9. To **change width** of steel ground sleeve, change digit 10 from a "0" to a "**1**" for **60" width**.
10. To **change width** of steel ground sleeve, change digit 10 from a "2" to a "**3**" for **60" width**.
11. To **change width** of steel ground sleeve, change digit 10 from a "6" to a "**7**" for **60" width**.

Note: Cl̄ēr SecTER Cabinet information can be found on page 19.

But Wait, There's More

In addition to rubber goods, we also supply surge arresters, tools, hotsticks, connectors, bushings, fusing, faulted circuit indicators, sectionalizing equipment and more. Now, you can get all of your products in one place – from one manufacturer – Eaton's Cooper Power Systems! If you need more detail than what is contained in this easy to use Specifier's Guide, we have additional information available on the internet at www.cooperpower.com.

Technical Support When You Need It

If you cannot find what you're looking for, or need more detailed information, please contact Customer Service at 1-877-277-4636 (within domestic USA), or email your questions to info@cooperpowercentral.com. Technical support and application information are readily available. Eaton's Cooper Power Systems can also provide practical, hands-on training using actual products so you can learn the easiest way to fit our products into your application.

Following is additional information available to you from a variety of resources.
